

GEOLOGY OF THE MABEL AREA

- LEGEND**
- INTRUSIVE IGNEOUS ROCKS**
- Tertiary intrusions, biotite mesocratic diorite / melanocratic diorite
 - Serpentine
 - Quartz porphyry / pyritic, aphanitic selvage phase
 - Felsite dikes
 - Schistose tonalite
- BEDDED ROCKS (ATTWOOD FORMATION)**
- Argillite, siliceous argillite and chert
 - Andesite and dacite lava and pyroclastic rocks

- SYMBOLS**
- Bad rock exposure
 - Badling altitude
 - Schistosity
 - Geological contact
 - Topographical contour (interval, 50 feet)
 - Diamond drill hole
 - Trench
 - Dump, embankment
 - Pit
 - Shaft
 - Portal, underground workings
 - Road
 - Unoccupied building
 - Chalcopyrite mineralization
 - Claims post
