SUMMARY REPORT ON
GEOPHYSICAL SURVEYS

SILVER GHOST PROJECT
SKEENA MINING DIVISION, B.C.

FOR
EQUITY SILVER MINES LTD.

BY
INTERPRETEX RESOURCES LTD.

Vancouver, B.C.
July, 1990

T.R. Matich

1.0 INTRODUCTION

A geophysical program consisting of electromagnetic (VLF-EM) and magnetic surveys was carried out on a single grid located on the Silver Ghost claim group in the Skeena Mining Division, B.C. The survey was carried out in July, 1990.

2.0 OBJECTIVES

- to establish a correlation between magnetic minerals and mineralized trends,
- to test the effectiveness of VLF-EM in following possible mineralized trends and to establish new unrecognized conductive trends,
- to establish geophysical areas of interest for future exploration.

3.0 SURVEY SPECIFICATIONS

Survey Parameters

- survey line separation - 100 m.
- survey station spacing - 12.5 m.
- VLF-EM and magnetic survey total 20.0 km.

Equipment Parameters

- VLF-EM and Magnetic Surveys
 - Scintrex Omni Plus combined VLF-EM and magnetometer
 - Dip Angle (in-phase) and Quadrature (out-of-phase) measured in percent at each station
 - VLF-EM Field Strength measured at each station
 - transmitting stations used - NLK (24.8 kHz) - Seattle, Wa.
 - NSS (24.0 kHz) - Cutler, Ma.
 - earth's total magnetic field measured in gammas (nT)
 - magnetic variations controlled by automatic magnetic base station recording every 30 seconds
 - instrument accuracy +/- 0.1 nT.

Equipment Specifications - see Appendix I

4.0 DATA

Calculations

Total Field Magnetic Survey

Total field magnetic readings were individually corrected for variations in the earth's magnetic field using magnetic base station values. The formula used for magnetic corrections was;

$$CTFR = TFR + (DBL - BSR)$$

where: CTFR = Corrected Total Field Reading

TFR = Total Field Reading

DBL = Datum Base Level

BSR = Base Station Reading

Presentation

- Magnetic data were profiled and are presented on Figure # 1 at a scale of 1:2500
- Magnetic data were contoured and are presented on Figure # 2 at a scale of 1:2500
- Cutler VLF-EM in-phase, out-of-phase and field strength readings are presented in profile form on Figure # 3 at a scale of 1:2500
- Seattle VLF-EM in-phase, out-of-phase and field strength readings are presented in profile form on Figure # 4 at a scale of 1:2500
- The geophysical interpretation and magnetic contours, trend enhanced along interpreted lineaments, are presented on Figure # 5 at a scale of 1:2500

5.0 INTERPRETATION

Discussion of Results

VLF-EM data collected over the Silver Ghost grid were noise free and no cultural conductors were observed. The Cutler and Seattle transmitters generated similar data, but the Cutler data set was interpreted as the primary frequency because it exhibited the most active response, probably due to better conductor coupling.

VLF-EM data were observed to be quite responsive and numerous northwest and northeast conductors were interpreted over the survey area. The VLF-EM interpretation has outlined three areas where conductors are concentrated. These areas are labeled conductor systems "C1", "C2" and "C3" on Figure # 3.

Conductor system "C1" is located in the southeast portion of the grid and contains three subparallel conductors running from line 200E to line 700E. As well this system contains one other shorter and weaker conductor. Conductors within conductor system "C1" trend east northeast and appear to be abruptly terminated between lines 100E and 200E to the west and conductor "C2" to the east. VLF-EM response ranges from medium to strong with individual anomalies characterized by short wavelengths and moderate to strong quadrature response.

Conductor "C2" is a long, northwest trending feature accompanied by two shorter, subparallel conductors between lines 100W to 100E. The western portion of conductor "C2" is characterized by numerous closely spaced conductors exhibiting medium to strong response and short wavelengths. Due to the complex, closely spaced anomalies within this system, delineating individual conductors was difficult. In order to more accurately define the multiple conductors discovered in this portion of the grid a more detailed survey would be required.

Conductor system "C3" is located in the northwest portion of the grid and contains numerous short, northwest trending conductors. VLF-EM response is similar to system "C1" response.

Three individual conductors, labeled "C4", "C5" and "C6" on Figure #3, are not located within the conductor systems discussed above.. Conductor "C4" is a weak, northwest trending feature that is interesting due to its association with a mapped mineralized shear zone. Conductor "C4" is characterized by weak VLF-EM response and a short wavelength. Trending east northeast, Conductor "C5" lies immediately to the north of "C4" and is characterized by strong response with short wavelengths. Conductor "C6" is located in the northern portion of the grid between lines 400E and 600E. This east-west trending conductor exhibits strong response and short wavelengths.

Total field magnetic data over the Silver Ghost grid were noise free with no cultural sources observed. Magnetic readings range from 57143 nT to 57593 nT. The magnetic datum value for the total field magnetic profile map, Figure # 1, was determined by statistical analysis to be 57250 nT. This datum value, which graphically shows if a magnetic reading is above or below the mean value for the grid, was also the threshold between dashed and solid contours on the total field magnetic contour map, Figure # 2.

The majority of the grid is characterized by relatively quiet magnetic activity. Three magnetic features were interpreted to be of interest and are labeled lineaments "L1" to "L3" on Figure # 2. Magnetic lineament "L1" is a relatively long, northwest trending series of weak magnetic highs. These magnetic highs exhibit monopolar response and range from 100 to 200 nT. above background values. The only correlation with VLF-EM results was between the subparallel magnetic lineament "L1" and conductor "C2".

Magnetic lineament "L2" is a northeast trending feature which exhibits a similar type of response as discussed above. Lineament "L2" intersects "L1" at line 100W.

Magnetic lineament "L3" is a northwest trending high feature which exhibits the strongest response observed on the grid. Lineament "L3" exhibits a closely spaced double monopolar response along its entire strike length.

Conclusions

The numerous VLF-EM conductors discovered on the grid are primarily interpreted to represent conductive structures. Stronger anomalies in the vicinity of conductor intersections may represent structural traps or fault dilations and are interpreted to be the best candidates for further exploration in the area. The predominantly short wavelength VLF-EM anomalies discovered by the present survey show that conductors in the area are mostly near surface and narrow. In addition, conductors often have a strong quadrature response indicating moderate conductance (conductivity-thickness product). A narrow conductor, such as those discovered here, would need to be fairly conductive in order to generate the strong quadrature responses discovered by the present survey. This implies that many conductors have good conductivity and suggests that some may contain sulphide minerals.

Conductor "C2" is interpreted to be the best geophysical target for further exploration. This conductor exhibits the strongest response discovered in the area and also roughly follows magnetic lineament "L1". The moderate conductance of conductor "C2" indicates that it probably represents a structural feature and from the complex and closely spaced anomalies concentrated around the western portion of the conductor, possibly a breccia or fault zone.

The weak conductor labeled "C4" is believed to represent the mineralized shear zone located at the origin of the grid. Conductor "C4" is interesting because the relatively strong quadrature response indicates a significantly strong, but narrow and short conductor. Since "C2" trends in the same direction it is possible that "C2" represents a similar and more conductive, possibly mineralized feature.

Conductor systems "C1" and "C3" are interpreted to represent structural features. Conductor system "C1" may reflect splay faults related to "C2" since most of system "C1" conductors intersect and terminate at conductor "C2".

Weak background magnetic response over the grid has allowed the delineation of subtle magnetic features. Relatively weak magnetic high features discovered by the present survey are interpreted to represent slightly basic (possibly fault controlled) dykes.

6. RECOMMENDATIONS

VLF-EM and magnetic methods have outlined magnetic and conductive trends warranting follow-up exploration. Surface geological investigations are recommended to determine the importance of targets discussed in order of priority in the conclusions section above.

If further geophysical surveys are planned, a vertical loop electromagnetic survey is recommended to more accurately define the conductance and location of strong VLF-EM conductors. A horizontal loop survey would be unnecessarily expensive because most conductors appear to be near surface. If disseminated mineralization is believed to be present, an induced polarization- resistivity survey is recommended to determine chargeable and resistive zones in the area.

CERTIFICATE

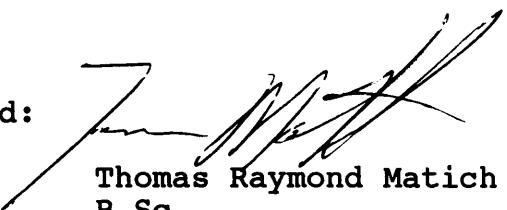

I, Thomas Raymond Matich, Geophysicist of Surrey, British Columbia, Canada, hereby certify that:

1. I received a B.Sc. degree in Geophysics from the University of British Columbia in 1982.
2. I currently reside at 13914 116 Ave, in the Municipality of Surrey, in the Province of British Columbia.
3. I have been practising my profession since graduation.
4. This report may be used for the development of the property, provided that no portion will be used out of context in such a manner as to convey meanings different from that set out in the whole.
5. Consent is hereby given to the company for which this report was prepared to reproduce the report or any part of it for the purposes of development of the property, or facts relating to the raising of funds by way of a prospectus and/or statement of material facts.

Date: Aug 12, 1990

AUTHOR'S NOTE

Data interpreted in this report were accumulated without supervision by Interpretex Resources Ltd. and were supplied by the Client to the writer(s). These data and the locations on the ground from which these data were accumulated are, except when specified otherwise by the writer(s), assumed to be reliable and correct and were interpreted using this assumption.

APPENDIX I

Equipment Specifications

NOVATEL II

VLF Magnetometer System

EDAN

Specifications*

Frequency Tuning Range	15 to 30 kHz, with bandwidth of 150 Hz; tuning range accommodates new Puerto Rico station at 28.5 kHz
Transmitting Stations Measured . .	Up to 3 stations can be automatically measured at any given grid location within frequency tuning range
Recorded VLF Magnetic Parameters	Total field strength, total dip, vertical quadrature (or alternately, horizontal amplitude)
Standard Memory Capacity	800 combined VLF magnetic and VLF electric measurements as well as gradiometer and magnetometer readings
Display	Custom designed, ruggedized liquid crystal display with built-in heater and an operating temperature range from -40°C to +55°C. The display contains six numeric digits, decimal point, battery status monitor, signal strength status monitor and function descriptors.
RS232C Serial I/O Interface	2400 baud rate, 8 data bits, 2 stop bits, no parity
Test Mode	A. Diagnostic Testing (data and programmable memory) B. Self Test (hardware)
Sensor Head	Contains 3 orthogonally mounted coils with automatic tilt compensation
Operating Environmental Range	-40°C to +55°C; 0-100% relative humidity; Weatherproof
Power Supply	Non-magnetic rechargeable sealed lead-acid 18V DC battery cartridge or belt; 18V DC disposable battery belt; 12V DC external power source for base station operation only.
Weights and Dimensions	
Instrument Console	2.8 kg, 128 x 150 x 250 mm
Sensor Head	2.1 kg, 130 dia. x 130 mm
VLF Electronics Module	1.1 kg, 40 x 150 x 250 mm
Lead Acid Battery Cartridge	1.8 kg, 235 x 105 x 90 mm
Lead Acid Battery Belt	1.8 kg, 540 x 100 x 40 mm
Disposable Battery Belt	1.2 kg, 540 x 100 x 40 mm

OMNIVIEW™ TIC-LINE™ Magnetometer

Specifications

Dynamic Range	18,000 to 110,000 gammas. Roll-over display feature suppresses first significant digit upon exceeding 100,000 gammas.
Tuning Method	Tuning value is calculated accurately utilizing a specially developed tuning algorithm
Automatic Fine Tuning	± 15% relative to ambient field strength of last stored value
Display Resolution	0.1 gamma
Processing Sensitivity	± 0.02 gamma
Statistical Error Resolution	0.01 gamma
Absolute Accuracy	± 1 gamma at 50,000 gammas at 23°C ± 2 gamma over total temperature range
Standard Memory Capacity	
Total Field or Gradient	1,200 data blocks or sets of readings
11c Line Points	100 data blocks or sets of readings
Base Station	5,000 data blocks or sets of readings
Display	Custom designed, ruggedized liquid crystal display with an operating temperature range from -40°C to +55°C. The display contains six numeric digits, decimal point, battery status monitor, signal decay rate and signal amplitude monitor and function descriptors.
RS 232 Serial I/O Interface	2400 baud, 8 data bits, 2 stop bits, no parity
Gradient Tolerance	6,000 gammas per meter (field proven)
Test Mode	A. Diagnostic testing (data and programmable memory) B. Self Test (hardware)
Sensor	Optimized miniature design. Magnetic cleanliness is consistent with the specified absolute accuracy.
Gradient Sensors	0.5 meter sensor separation (standard), normalized to gammas/meter. Optional 1.0 meter sensor separation available. Horizontal sensors optional.
Sensor Cable	Remains flexible in temperature range specified, includes strain-relief connector
Cycling Time (Base Station Mode)	Programmable from 5 seconds up to 60 minutes in 1 second increments
Operating Environmental Range	-40°C to +55°C; 0-100% relative humidity; weather proof
Power Supply	Non magnetic rechargeable sealed lead-acid battery cartridge or belt; rechargeable NiCad or Disposable battery cartridge or belt; or 12V DC power source option for base station operation.
Battery Cartridge/Belt Life	2,000 to 5,000 readings, for sealed lead acid power supply, depending upon ambient temperature and rate of readings
Weights and Dimensions	
Instrument Console Only	2.8 kg, 238 x 150 x 250mm
NiCad or Alkaline Battery Cartridge	1.2 kg, 235 x 105 x 90mm
NiCad or Alkaline Battery Belt	1.2 kg, 540 x 100 x 40mm
Lead-Acid Battery Cartridge	1.8 kg, 235 x 105 x 90mm
Lead-Acid Battery Belt	1.8 kg, 540 x 100 x 40mm
Sensor	1.2 kg, 56mm diameter x 200mm
Gradient Sensor (0.5m separation - standard)	2.1 kg, 56mm diameter x 790mm
Gradient Sensor (1.0m separation - optional)	2.2 kg, 56mm diameter x 1300mm
Standard System Complement	Instrument console; sensor; 3-meter cable, aluminum sectional sensor staff, power supply, harness assembly, operations manual.
Base Station Option	Standard system plus 30 meter cable
Gradiometer Option	Standard system plus 0.5 meter sensor
