Dear Wally:

Re: Richfield Prospect, Cobre Mines, B.C.

I enclose a report and supporting drawings on the Richfield Au-Ag prospect, Topley, B.C. I obtained the report and property submission from M. Fitzgerald of Cobre Exploration Ltd., owners of the property.

Cobre drilled 28 diamond drill holes on the Richfield prospect and developed approximately 170,000 tons of 0.124 oz per ton gold and 5.60 oz per ton silver, according to calculations made by F. Whiting. Additional reserves can be expected at depth and possibly along strike. The mineralized zone is a stratabound chert-pyrite-chalcopyrite horizon within the Telkwa volcanics (Jurassic), a mixture of basic and felsic flows and fragmental rocks.

I discussed terms of a possible deal with Fitzgerald and he suggested the following:

- \$50,000 down on signing agreement, plus annual payments of \$50,000
- \$500,000 work program for the first year (1981)
- Dome to earn 65% by putting property into production

The above terms are only openers, Cobre is open to proposals. I think the property has a good deal of merit but the terms are too steep - particularly the cash payment. A property examination is also necessary. Cobre would like the report returned if you are not interested.

Yours very truly,

Coburn Explorations
Topley area B.C.
File # 4112

Length 70 metres

Width avg (6' to 23') prob avg 10'

Tons 170,000 tons

Grade .124 oz Au 5.60 oz Ag

Down plunge extent 300 metres and "open"
Vertical depth 200 m.

TPVF $170,000 \pm 600 = 283$ say 300 TPV.

- Potential — length potential limited
- poss other en envelope zones
 - cons strite length of favourable host rocks to explore but if all shoots were of this type development costs would be very high.
 - probable volcanogenic origin and ii chance of multiple zones.

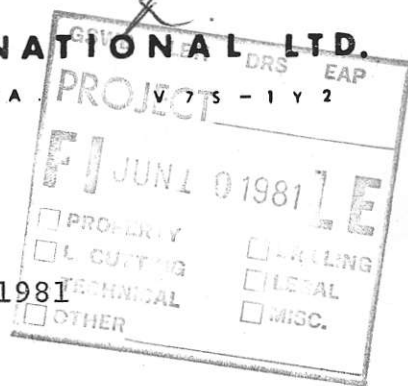

Deal Offered Terms very onerous.

Dear Mr. Bruce :

Re: The Richfield Property of Cobre Exploration.

My report on this property is enclosed. The 1980 drilling clarified the nature of the deposit as being " volcanogenic " and bedded, and proved up a modest reserve of fair grade ore. There is excellent potential for finding more ore :

- a) by drilling on down the rake of the known B-C and D ore shoots towards the southwest; the Au-Ag-Pb-Zn beds are getting more numerous in that direction, suggesting that we may be approaching a sector with thick massive ore.
- b) by following through the rhyolitic pile towards the north and northwest, looking for massive ore in the center of the pile, or breccia ore in an explosion vent, and for a repetition of the B-C and D Zones on the other edge of the pile.
- c) by moving south along the top contact of the Footwall Andesites, looking for new felsic build-ups.

2.

Cobre wants to have at least \$ 500,000 in drilling done this year. Favorable terms can be worked out as long as an aggressive work program is to be laid on.

We have several core boxes in Vancouver for inspection, with the main ore intersections. The rest is at the property.

Best regards,

A handwritten signature in dark ink, appearing to read 'F.B. Whiting', is written over a horizontal line. The signature is cursive and somewhat stylized.

Dear Mr. Whiting:

Re: The Richfield Property

Thank you for your June 9th letter, with accompanying report and maps, addressed to Mr. G.S.W. Bruce in connection with the above.

As it happens, Mr. Bruce is out of town for a week or so and is therefore unable to reply.

Upon his return I will bring your letter and report to his attention.

Yours very truly,

DOME EXPLORATION (CANADA) LIMITED

Mrs. Rita Bolton
Secretary to Mr. Bruce
