

I.P. Data Line 100 N  
I.P. Data Line 050 N

- ROCK TYPES**
- X X X X Hypabyssal andesite: fine to coarse grained and porphyritic chlorite altered
  - U U U U Ultramafics: chlorite-actinolite altered, fine to coarse grained, magnetite bearing
  - A A A A Diorite: medium grained
  - Shear zone: orientation as indicated
  - Massive quartz
  - Quartz diorite dyke
  - Mafic dyke
  - Breccia: monomict, clast or matrix supported clast type according to other rock symbol
  - Foliation
  - quartz vein (thickness) gauge
  - carbonate vein (thickness)
- ALTERATION**
- C Clay alteration (includes sericite and unknown brecciated zones)
  - S Silica alteration
  - L Chlorite / talc alteration
  - cb Carbonate alteration
- MINERALIZATION**
- py pyrite
  - po pyrrhotite
  - cpy chalcopyrite
  - aspy arsenopyrite
  - mr malpasite
- GEOCHEMICAL ASSAYS**
- 1767, 835-Cu (ppm) Au(ppm)
