

ROCK TYPES

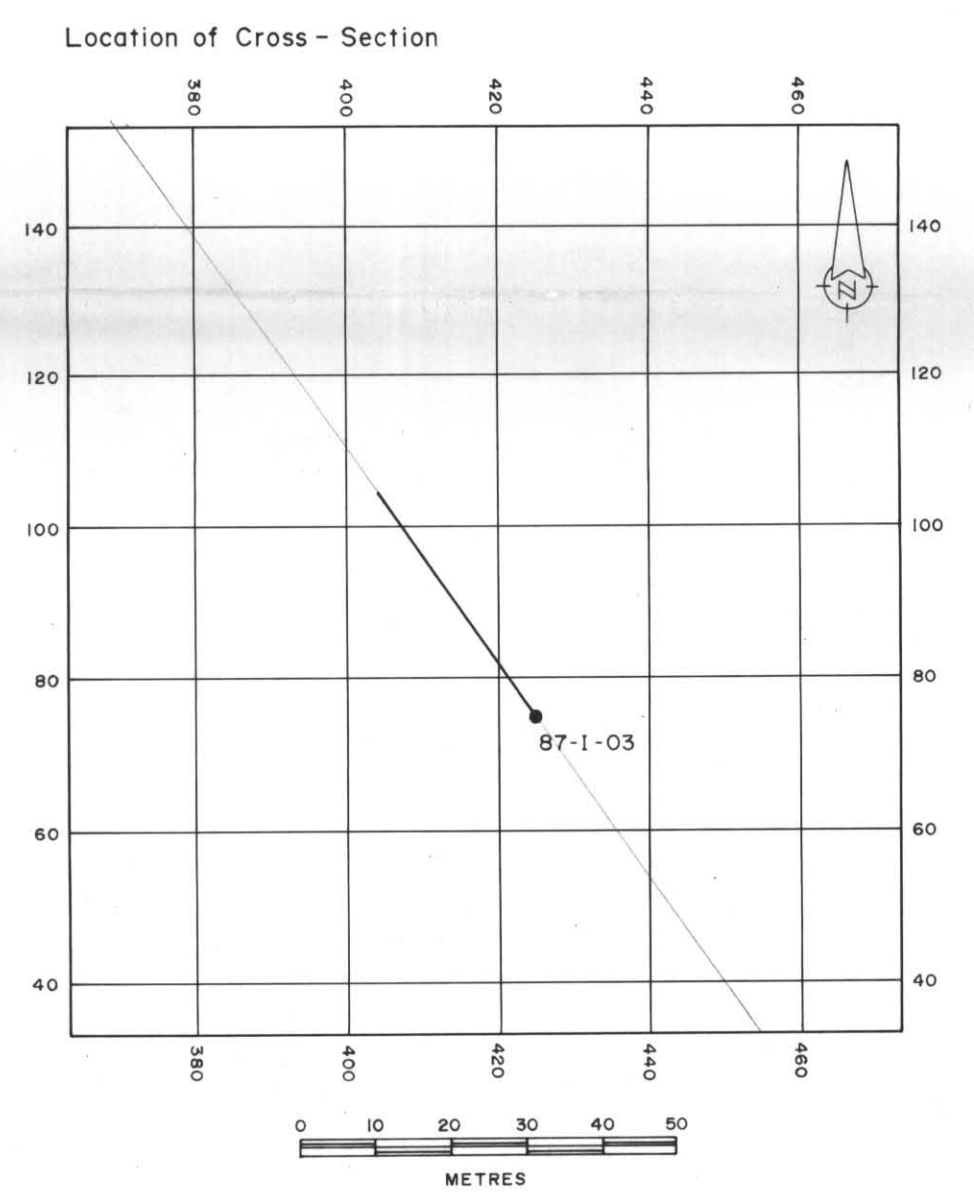

X X X X X	Hypabyssal andesite : fine to coarse grained and porphyritic chlorite altered	▨	Quartz diorite dyke
U U U U	Ultramafics : chlorite-actinolite altered, fine to coarse grained, magnetite bearing	▨	Mafic dyke
A A A	Diorite : medium grained	▨	Breccia : monomict, clast or matrix supported clast type according to other rock symbol
▨	Shear zone : orientation as indicated	▨	foliation
▨	Massive quartz	▨	a quartz vein (thickness) gouge
		▨	cb carbonate vein (thickness)

ALTERATION

C	Clay alteration (includes sericite and unknown bleached zones)
S	Silica alteration
L	Chlorite/talc alteration
Cb	Carbonate alteration

MINERALIZATION

py	pyrite
po	pyrrhotite
cpy	chalcopyrite
aspy	arsenopyrite
mr	mariposite
