Gentlemen:

SUBJECT: INTERIM REPORT - ASSAY VALUES TWIN 9 INTERSECTION

Assay values are enclosed for the visual intersection on Twin 9 reported for July.

Although values are significant in themselves, holes drilled to either side and underneath this intersection returned only insignificant values.

A summary of activities for August will be sent to you in due course. Drilling has now ceased on the property and no further significant exploration is anticipated this year.

Yours sincerely,

J.A. McDonald
Exploration Manager

INTERIM PROGRESS REPORT

TWIN PROPERTY

We have received assay results from the mineralized interval in drill hole Twin 9, as reported in the July progress report. These results are as follows:

<u>From</u> (m)	<u>To</u> (m)	<u>Interval</u> (m)	<u>Au</u> g/t	<u>Ag</u> g/t	<u>Cu</u> %	<u>Pb</u> %	<u>Zn</u> %
79.3	80.6	1.3	0.26	5.0	0.03	0.22	0.38
80.6	81.4	0.8	5.59	104.1	0.70	0.50	4.40
81.4	82.2	0.8	9.45	127.5	0.37	2.50	3.10
82.2	83.0	0.8	11.32	600.0	0.50	2.21	1.90
83.0	83.4	0.4	0.51	0.0	<0.01	<0.01	0.04
<u>Average</u>							
80.6	83.0	2.4	8.79	277.2	0.52	1.74	3.13

As anticipated in the July report, holes drilled on either side and underneath this intersection have returned only negligible values. This intersection, as well as that previously reported for Twin 3, appears at this stage to be localized and of negligible economic significance.
