

LEGEND

- 2 Maroon to grey to greenish andesites. Predominantly augite > feldspar porphyritic flows, local rubbly textures suggest fragmentals. Feldspar > augite, feldspar porphyritic andesites 2a.
- 1 Green to grey andesites. Augite porphyritic to fine chloritic flows.
- Outcrop
- Dip and strike of predominant fracture set $\frac{1}{2}$ slickenside lineation
- Dip and strike of fault
- Chip sample location
sample no. / width in metres
- 6.1 Locality number.
- Steep slope, cliff.

Pervasive Epidote Alteration
 WMS weak, moderate, strong
 / epidote on fractures, veinlets.

Mineralization
 Mal. malachite
 cc. chalcocite
 bn. bornite
