Dear Mr. Kimura:

**OKA & ELK Properties
Progress Report
Period: June 1-30, 1988**

On the Oka property during the month of June, 16 (88-19 to 34) reverse circulation drill holes were completed and two were deepened (88-15 & 16), fulfilling the proposed drilling in the Iron Horse and Bolivar West areas. Results up to hole 20 have been received with hole 15 returning 4572 ppb Au over 3.0m and hole 20 returning 6802 ppb Au over 4.6m. A complete list of values greater than 300 ppb is attached. Also enclosed is a compilation map showing areas of reverse circulation drilling as well as a current drill plan of completed holes in the Iron Horse area. The drill was double shifted as of May 30 and 2641.86m were drilled in 16 holes as of June 30 for an average drill rate of 96m per day. Two days of drilling were lost to down time fishing for dropped rods. Estimated date of completion of drilling is July 10.

Linecutting on the Elk property is currently underway with an estimated completion date of July 7. Bids are being accepted for the construction of the road to the Siwash North trench area and work is estimated to begin on July 10. Mobilization to the Elk property and camp construction will begin on July 2 and soil sampling is planned to start on July 5.

Yours very truly,

CORDILLERAN ENGINEERING LTD.

W. Jakubowski
Project Geologist

Dear Mr. Kimura:

OKA & ELK Properties
Progress Report
Period: July 1-31, 1988

On July 19 the Oka drill program was completed for a total of 5988.48m in 43 holes. During the report period, six holes were drilled in the Bolivar East area. There were four holes drilled in the Bolivar Road area, a follow-up hole was drilled in the Iron Horse area 50m west of OK 88-5 and two holes were completed in the Cap area. Sample results have been received up to hole 34 and the significant results are appended.

You will also find attached a current compilation map and individual drill plans of the five areas which received drill investigation. The drill chip processing facility was dismantled on July 21 and the crew has mobilized to the Elk project.

Linecutting on the Elk property was completed on July 11 and approximately half of the 50m station soil sampling has been completed. Road work to the Siwash North trench area is 2/3 complete and the excavator will be mobilized to the property on July 23 with work beginning on July 25 as scheduled.

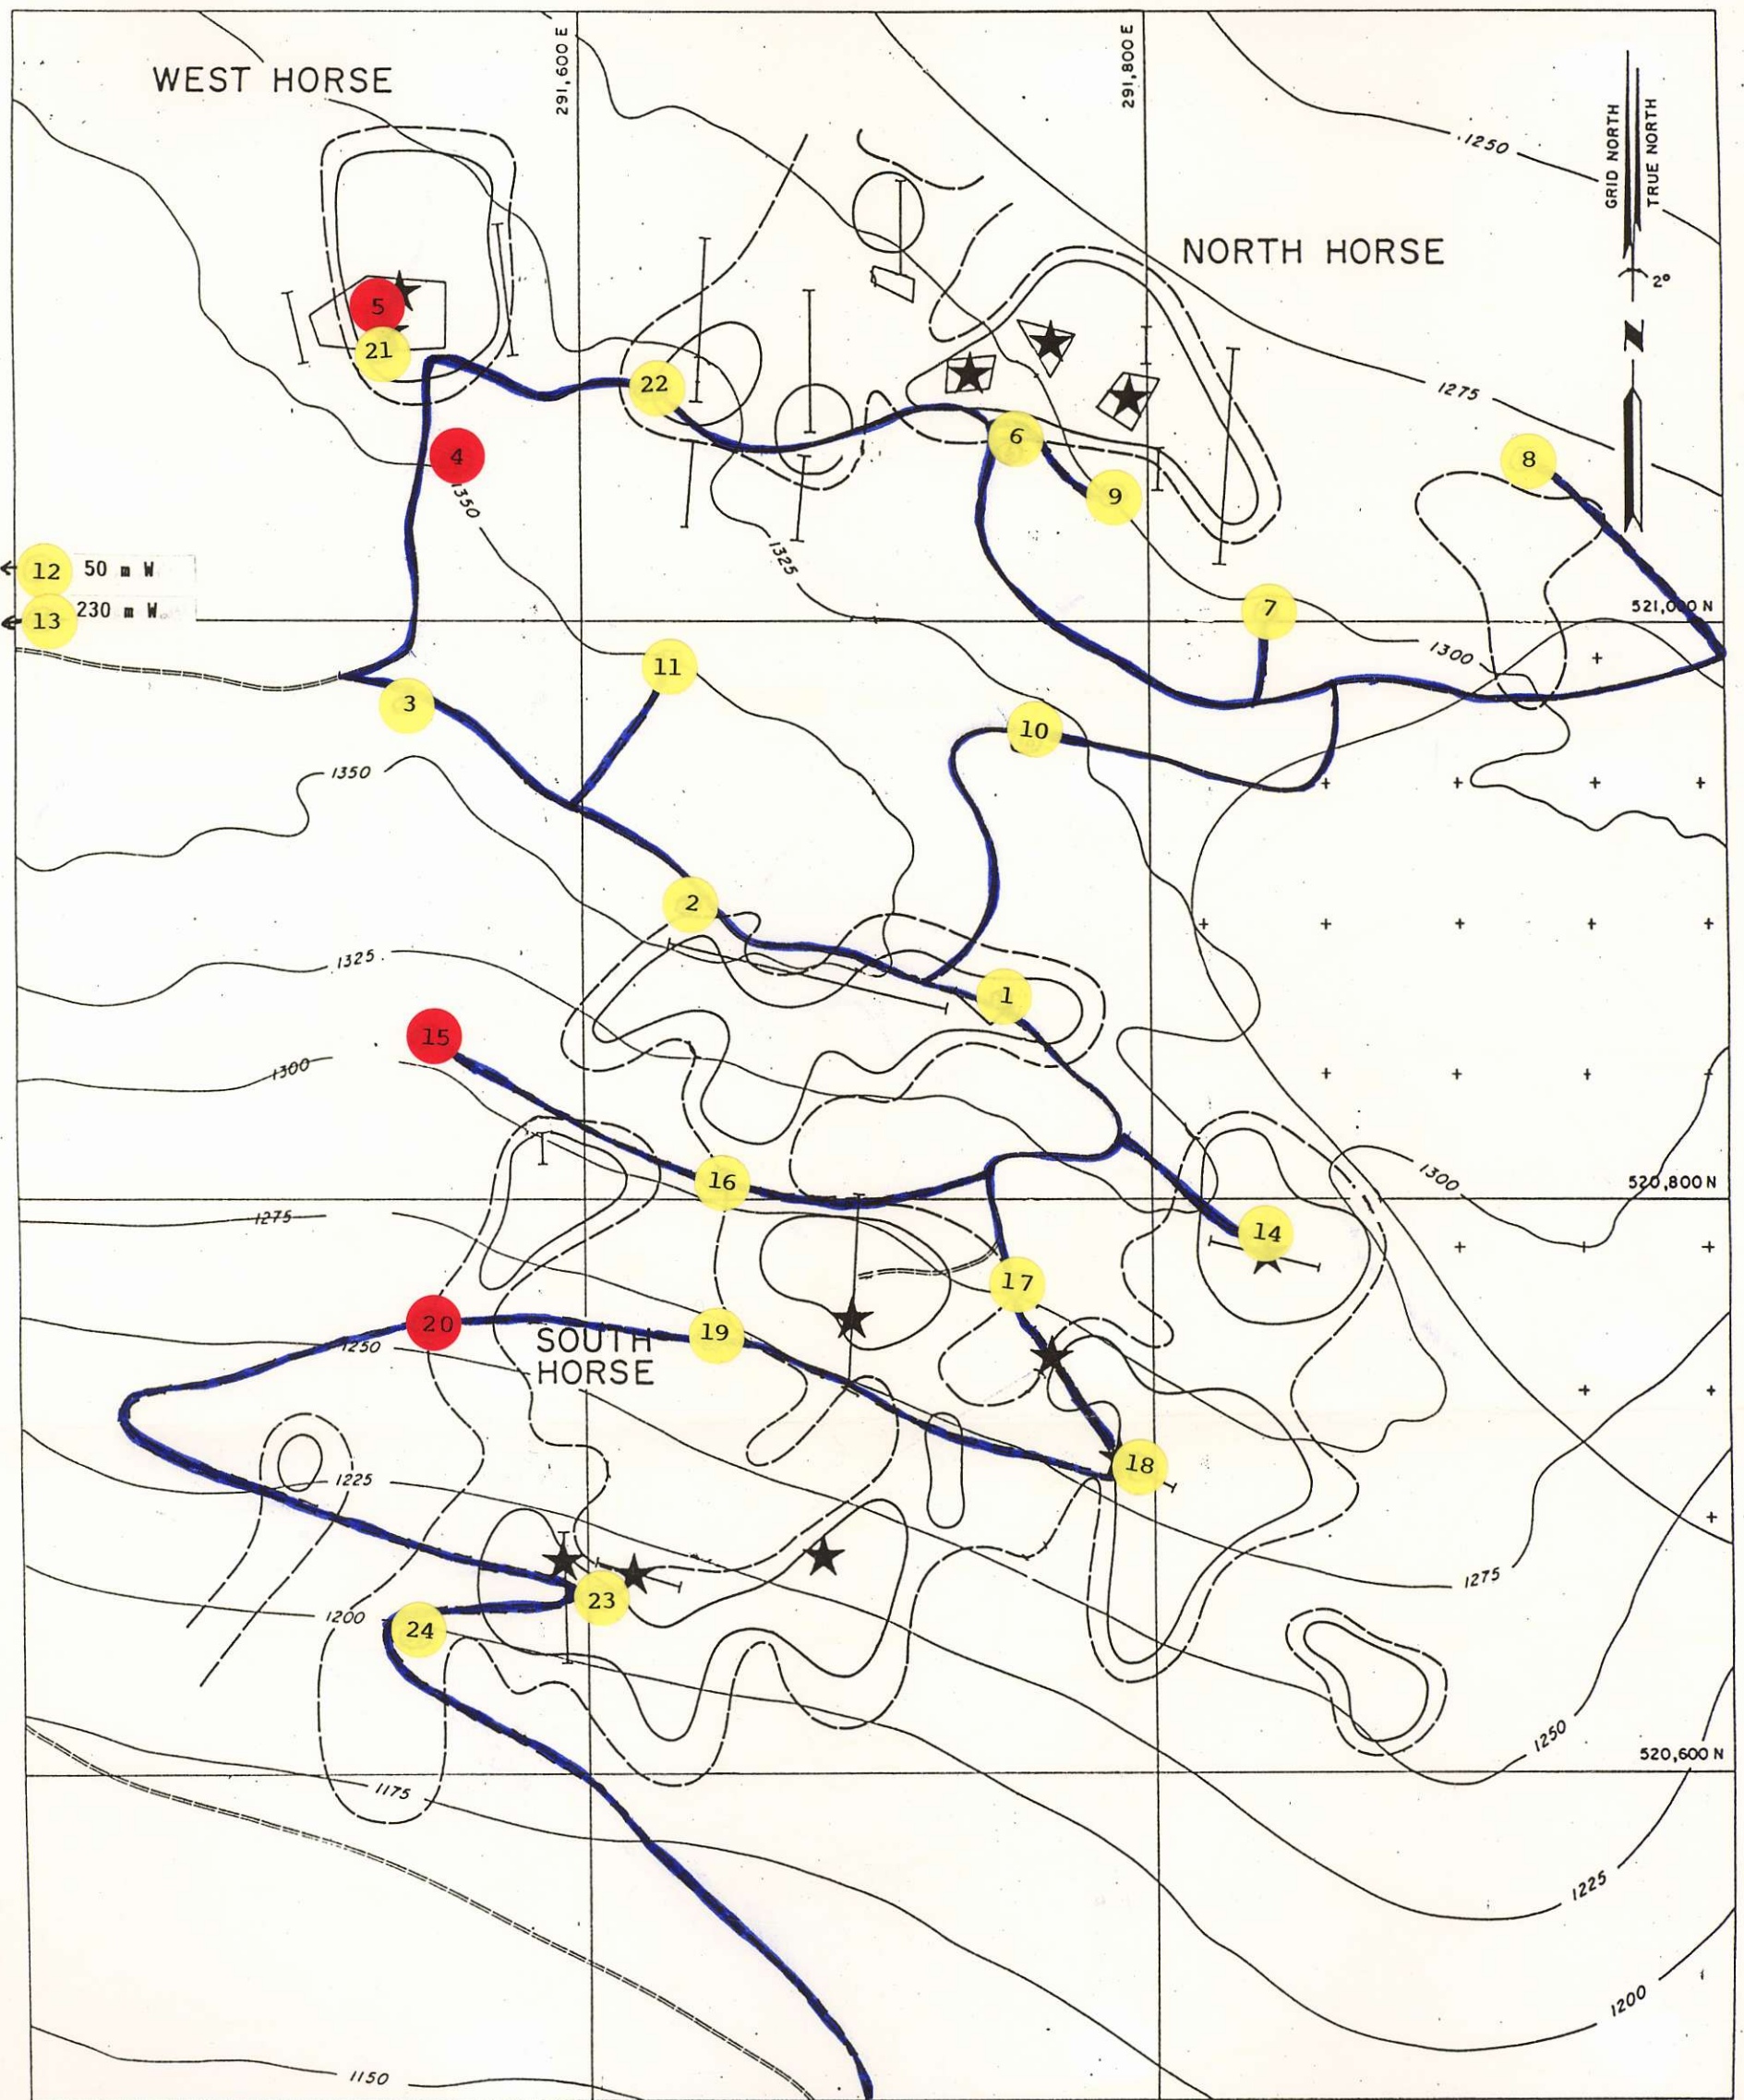

Yours very truly,

CORDILLERAN ENGINEERING LTD.

Sr. Vice President-Exploration

Dear Sirs:

Oka Property

Enclosed is a copy of the claim map covering the OKA property area. The OKA 12, 13, 14 and 15 claims were added in June, 1988 to cover a similar geological setting to the Iron Horse showing area. Garnet skarn with local pyrite, pyrrhotite, sphalerite zones is exposed on the OKA 13 claim.

The BRAE 2 and BIO claims are owned by N. Lenard from Westbank and the DAL 1 to 11 claims are registered in contract stakers' names, still to be transferred. Most of these claims were staked in July 1988. We have soil sampled the new OKA claims and have some weak gold values to be followed-up. Some of the gold anomalies extend onto the adjoining BRAE 2 claim.

Yours very truly,

CORDILLERAN ENGINEERING LTD.

J. D. Rowe, B.Sc.
