

Sonora
AKIE

Sonora Mining Seminar 880107

Vancouver, Canada

November 10, 1992

May 17/96

Economic = 10m @ 20% Zn

\$ 1.5 m

95-19 - downdip (to N) of 18

(stopped @ 800 m in Nov. '95
- will re-enter & drill to
target @ 1200 m in June '96)

(best interest on vector model)
- using Pb/Pb Bar ratios (Vend/source)

Fossil
m.s.
in

Alpinites cf. Kayser (ammonite)
Lower - Middle Famennian

2 ddh from
footwall

(1 of 3 in the world!)

South zinc 'anomaly'

> 6500 ppm Ba.

- min. at base
of Gundersell

ddh P5 (1996) - waterfall barite showing - farthest south
(across Akie R.) - 8m thick blebby bar.

R10 - detailed soil sur. disc.

1 'seep' south (along strike) of Cardiac Ct.

Muskwa showing to south (3 km from Akie) (3 drill targets ID - may get to this yr?)
- nodular barite (+Pb/Zn)

- old Gnome (Cominco) cls. - gossans

competent FX = PW rx (carbonates)
(cf. HW argill.)

YOS → AKIE
Apr. 2015

Minerals North-South

AKIE

- Paul Baxter

1400m x 300m depth (open)

- dip @ 75°W

Zn-Pb-Ba min. with HW py-rich

- grade & thickness inc. to depth.
- thin ls. unit @ base of MS.

FW - calcareous sst. (Road River Fmn.)

HW - pyritic shales (Gunsteel Fmn)

- geophysics - good to trace Gunsteel Fm -
(no sig. X-faults)

- indication of 'higher grades' eq. > 21% Zn, 4% Pb
22g/t Ag

Target ~~to~~ 50m x > 10% Zn
(ULF, resistivity)

4-5,000 m ddh (deep) planned
