Commander owns eight properties in north-central British Columbia hosting porphyry >> See Map & Historic Results. Mineralization is associated with Hogem Batholith intr kilometre radius and proximal to access roads. Two (Abe, Pal) have drill-ready target: properties can be quickly brought to drill stage.

Numerous mines and sub-economic deposits have been identified in similar rocks exte Kemess Copper-Gold Mine is currently in production with a second deposit slated for permitting process. Resumption of production is under review at the Mt. Polley Mine ii Afton mines at Kamloops, QE Gold and Princeton Copper are past producers.

Improved metal prices and more favourable exploration climate has revitalized intere welcomes joint venture proposals on these properties.
