Subject: Lane Weekly Report for Oct. 7-12.

EXPLORATION MONITORING

Ace. A modest trenching program is expected to get under way next week on Barker Minerals Ace property in the Likey area. The company will be testing several coincident I.P.-geocemical anomalies south of the Little River.

Akie. Ecstall Mining Corp. is unhappy with the diamond drill program conducted by 60% JV partner Inmet Mining Corp, on the Cardiak Creek zone. Ecstall feels that Inmet did not live up to the requirements of the joint venture agreement and is considering legal action!

Beekeeper. Drilling has started on this joint venture project, owned equally by Eastfield Resources Ltd. (operator) and Imperial Metals Corporation, located near Horsefly. Approximately 4,500 ft. of reverse circulation drilling is planned. Progress so far has been good and the program is expected to wrap up in about two weeks.

JD. <sup>(Fredriggme)</sup> Recieved Notice of Completion stipulating that this years exploration program has officially been terminated. *i.e. spent ~ 20.8M*

Redgold. Imperial Metals plan to conduct a modest diamond drill program on their Redgold property in November. They are intrigued with the disseminated copper mineralization and intense alteration/metasomatism seen in core from early 1990s drilling.

Baker (Fredriggme)  
Multinational B. Ed Pittman and Graham Seal-Jones report that Sable Resources has mined 2,500 tonnes of ore from the B Vein on the old Baker mine property and are currently milling the material at a rate of 170 tpd. They should complete the project in the next 2-3 weeks. Head grades are 0.8 opt Au. The operation is expected to produce 6 to 6.5 three-thousand ton bags of concentrate that grades 35 opt Au, 200 opt Ag and 16% Cu. Shutdown and reclamation of the site will follow.

Mount Polley. Imperial Metals has proposed the excavation of two test pits for further metallurgical testing purposes.

Chaco Bear. Imperial Metals plans to commence drilling on the porphyry copper project, located west of Bear Lake and northwest of Takla Lake, this weekend.

Projects  
-----

\* The final license agreement has been signed to allow Hyperborean Productions (1996) Inc. to sell MINFILE using CD Rom technology.

(K3)

\* Trygve Hoy's recent field work while working with Fil Ferri in the Barkerville area identified felsic volcanics for the first time in the Barkerville Succession in the Ramos Formation. This lends credence to a possible correlation with the Easgle Bay Formation which would increase the potential for discovering VMS deposits. Currently the Ramos is believed to be older (Late Proterozoic to Early Paleozoic) although there are no age dates to support this interpretation.

Ace

\* While in the field, Trygve also inspected the newly trenched bedrock exposure of semi-massive sulphides on the Ace property (first in place mineralization).

\* MINFILE coding:

- 1) Larry Jones continues on final editing of 82ESW and edits to 82ESE which incorporates edits by Neil Church to summary sheet and legend.
- 2) George Owsiacski continues to update occurrences in Lower Mainland and 92INW.
- 3) Garry Payie is working on the web page and edits for the Vancouver Island special edition release.

Cariboo Gold City

\* International Wayside has requested that their \$20,000 funding for the Barkerville Gold project. They decided not to continue with the project after it was down-sized due to funding problems with other industry partners. Both International Wayside and Godl City are keen to see fieldwork in the Barkerville Camp next year.

\* Mike Fournier is working with Barry Ryan on the coal web page.

Upcoming Events  
-----

NWMA	Dec. 2-5	Spokane
Metallogeny of Volcanic Arcs short course	Jan. 25-26	Vancouver
Roundup	Jan. 27	Vancouver
Pathways Meeting	Jan. 28-30	Vancouver
Industrial Minerals '98	Oct. 19-23	Vancouver

Subject: NE-C Weekly Report

The Gataga release has been tentatively rescheduled for "early July", possibly the 8th.

The release of Pinchi survey data will likely take place in the fall.

Visited Redgold property on June 5th. Steve Robertson provided me with an excellent tour of the property.

Dropped by Mount Polley Mine site on June 5th and spoke briefly with Eric Leneve.

Met with prospector Dave Jaworski and discussed his plans for the Toadoggone.

Dan Hora dropped in to the office to discuss Industrial Mineral activity in the region and the market potential for various I.M. products.

Met with prospector Fred Nielson to look at several rock samples from claims he will work as part of his PAP grant.

*E* *36*  
Spoke with Charles Lammle, Director of Barker Minerals (ACE property): An I.P. survey has just been completed on the property, and the proposed trenching program will not proceed until the geophysical report has been completed, and may be put on hold until the company goes public (which could be several months!). Barker has also staked the Maybe showing (Minfile 093A 110), that is described as a stratabound Pb-Zn-Ag occurrence.

Prepared "Summary of exploration '95/Preview of exploration '96" talk for Tumbler Ridge on June 10th.

Wrote up a Co-op Student project proposal.

Bob Lane,  
Regional Geologist,  
Prince George.
