Subject: Weekly report, June 18

Babine

Discussed Hudson Bay's Babine area program, follow-up to 1997 airborne EM survey, with Vic Sidic in Granisle. Conductors on the FUL, MOR, KUT and LEN claims are all new targets that have not been previously detected/explored. The KUT anomaly is being discounted because ground work shows the area is likely underlain by Tertiary volcanics. Follow up work on the other properties consists of ground EM, soil geochem and geology/prospecting on a control grid. Very little outcrop has been found to date and Sidic anticipates the anomalies will have to be drilled (next year, 1-2 holes each) to be explained.

Visited Ralph Keefe, Prospector assistance recipient, on June 16-17 in the Babine district. Examined/discussed his Hagan project and accompanied him prospecting new logging roads/cut blocks near Natowite Lake.

*Eskay
Ck.*

Prime Resources defined a new target south of Eskay Creek on the Mackay Lakes property last year that is being followed up with 8 holes this year.

Manalta will submit its Telkwa Project Report in July. Company is optimistic it has successfully addressed ARD issues.

Zymo

Zymo porphyry prospect (PAP project of Robin Day) to be examined by Freeport-McMoran in July.
