Mineral Exploration News:

- **Gold City Industries Ltd.** have announced results from the first 4 holes drilled on the Grenoble Zone at the **Lexington** project, comprising auriferous pyrite-chalcopyrite veins hosted by dacite near a low-angle serpentinite contact. Hole 03GCD-0 intersected 4.57m assaying 28.68 g/t Au and 1.17% Cu - higher grade than most past reported assays from the deposit. Other intercepts reported ranged from 7-9 g/t Au and 0.4-3% Cu over widths of several metres. The company have now completed 2138.7m in 47 holes on the **Gold Crown** property, several more holes on the **Lexington** property, and a trenching program on their JD property. Significant intersections from the first 6 holes on the **Golden Crown** property include 1.86m assaying 362.82 g/t Au (9.5 oz Au/t!!!) and 0.39% Cu in 03CDH-01 and 1.25m assaying 72.14 g/t Au and 1.31% Cu in 03CDH-03. This mineralization occurs in the steeply dipping King Vein which comprises pyrrhotite-pyrite-quartz-chalcopyrite-native gold and is comparable to the Rosland mesothermal veins. Assays from the remainder of the holes/trenches are pending. The Lexington and Winnipeg-Golden Crown deposits are part of the Greenwood Gold development project and both properties are located in the historic Greenwood Mining Camp.
- **Chapleau Resources Ltd.** have completed another short phase of drilling on their **Lookout (Bar 19)** gold property west of Cranbrook and have now moved to the **Jackleg** gold property east of Wasa for a 4 hole drill program. No results have been released recently.
- **Goldrea Resources Corp.** have completed a 5 hole drill program on their **Crowsnest** gold project and a 2 hole program on their **Howell** gold project; both properties located in the Flathead drainage basin. No assays have been reported yet.
- **Lalo Ventures Ltd.** are currently drilling 1 hole on their **Aubyrd** property, under option from Commerce Resources, immediately south of the **Crowsnest** property to test a combined geophysical/geochemical anomaly.
- **Sultan Minerals Inc.** have almost completed a ~20 hole program on their Kena Project near Nelson - following up on the high grade magnetic corridor they identified earlier in the year, as well as the results of the detailed structural mapping that was carried out on the property during the summer. Assays will be reported all at once when available.
- **Klondike Gold Corp.** successfully completed an extension of hole L-80-1, started by Cominco in 1980, to test the LMC in the Lewis Creek area north of the Payday Basin. Results were reported from the intersection of the LMC in the **Fran** drillhole extension NE of Moyie Lake; two intervals of 1.1 and 1.3 metres assayed approximately 0.25% Zn. The LMC laminated mudstone unit in the Fran hole was ~40m thick. The hole 1km to the east of SMC 95-1, at the north end of the **Payday** basin, which has been underway since July is currently at ~3400 feet and is near the target LMC horizon. Subsequent to completing this hole the company plans to drill one hole in the Spider-Kidd Creek area, then move north to the Clair and Pit/Ash properties.
- **Anglo Swiss Resources Inc.** have announced that they have obtained an "Option Joint Venture Partner" to advance their **Kenville** gold property outside of Nelson. They didn't mention in their news release who it was.
- **Grid Capital Corporation** have commenced a 3 hole 300m drill program on the **Rosland Wollastonite** property north of Rosland which they optioned from Horst Klassen.
- **Cline Mining Corporation**, a company backed by **Mitsui Matsushina Co.** of Japan which operates in Australia, Indonesia, China, and North America (has a JV interest in **Pine Valley Coal** and an equity interest in **Western Canadian Coal**), have acquired coal licences over the **Sage Creek Coal Deposit** in the Flathead basin. Sage Creek Coal Company (a subsidiary of Rio Algom) carried out extensive drilling, mapping, trenching, and bulk sampling was carried out in the 1980s, as well as a detailed feasibility study and Stage 1 Environmental Assessment Report. In-place met coal resources are reported to total 149.9 Mt in 3 seams aggregating 28m thickness in the North and South Hill deposits combined. The company plans to carry out a detailed review of the available data and do additional work as necessary to fully evaluate the economics of moving the deposit towards production.
- A geophysical survey is currently underway on **Delta Exploration's Silver Lynx VMS** property west of Nelson. The company plans a short follow-up drill program this year depending on timing of financing and weather.

Other:

- **Stitikne Gold Corporation** is planning investor meetings to discuss their **Sullivan Deeps** project plans in Kimberly on November 12, Cranbrook in November 13 and in Trail on November 14.

Subject: D.A. Terry Report, July 16, 2002

RG Activity:

- Land Use referrals
- Mineral Exploration tracking and monitoring
- property visits
- Visits to Lone Peak and Sawmill Creek area with Tom Schroeter (July 17-18)

Mineral Exploration Activity:

AuByrd: Solitaire Minerals is planning to commence surface exploration on its AuByrd property in the Flathead area before the end of July. The work will include surface Mag surveying, prospecting, and stream sediment sampling.

Alan
Athelton-Jackpot: A NoW has been received for 150m of new trenching and cleaning out of 80m of previous trenching on the Athelton-Jackpot property, located NW of Grand Forks.

② **Howell/Crowsnest:** Goldrea Resources Corp. has announced that it will be contracting Fugro Airborne Surveys to fly 150 line kilometres along 200 metre spaced flight lines with helicopter-borne magnetic and radiometric surveys on its Howell Au property in the Flathead area. The airborne survey, scheduled to be completed in the next week, will be followed up by drilling. Goldrea will carry out a program of mapping, trenching, and drilling on the Crowsnest property, slated to commence in late August.

Kena: Sultan Minerals have been carrying out a field program over the last month comprising, geological mapping, IP surveying, soil sampling, and chip sampling on the Kena Project. Drilling will be commencing soon and the program is expected to continue until late September under the currently approved budget.

Lone Peak: Golconda Resources are currently drilling hole 3 from the pad on top of Lone Peak. Holes 1 and 2 from the setup were 400' and 200' while the current hole is expected to be approximately 1000' in length and is targeting the Spar Lake quartzite horizon. No results are available from the drilling carried out to date from this setup.

Ward: Jonpol Explorations has carried out a soil sampling program on its Ward Cu-Au property in the Beaverdell area. A trenching program will be carried out to follow up on anomalous results from the geochem survey.

Subject: D.A. Terry Report, May 31, 2002

Regional Geologist Activity:

- Land Use Referrals
- Exploration activity monitoring
- Viewing Lone Peak core
- Gold in BC write-up

Mineral Exploration Activity:

AuByrd: Solitaire Minerals Corp. has acquired an option on the AuByrd 1-3 claims (CONFIDENTIAL - No Press Release yet) that tie on to the southern end of the Crowsnest Au property in the Flathead Valley which GoldRea recently optioned from Eastfield Resources. The property overlies a prominent airborne magnetic anomaly along trend to the south of mineralized syenite on the Crowsnest property.

DA Vent: Klondike Gold have finished their first drill hole on the DA Vent property, located along the Lumberton Road near Cranbrook. The hole was intended to test the LMC at between 2000 and 3000 feet depth, however, the hole encountered a thick gabbro sill near its base. The LMC was intersected (Confidential) below the sill and the hole was shut down at 3700'. No results of the drilling have been released. Plans are being made to carry out more drill testing on the Cool Vent (Yahk) and Golden Egg (Perry Creek) properties, commencing sometime in the next few weeks. A NoW for 2 holes totaling 800m on the Golden Egg/Prices Pit property in the Perry Creek drainage has been received.

Chauncey Ridge: Fording Coal has submitted a NoW for 10 drillholes totaling 4320m on its Chauncey Ridge coal licence.

Kena: A NoW has just been received from Sultan for 8,000m in 50 holes to be drilled from 44 sites on their Kena Au project southwest of Nelson. Work is planned to start in the near future.

Lone Peak: Golconda Resources has just finished drilling hole 5 on the Lone Peak property. No results have been released from the drilling to date. The next phase of work on the program will involve extending the current logging road on Lone Peak to access the area with gold bearing quartz veins hosted by the Spar Lake quartzite unit on the south side of mountain for drill testing.

Vowell Creek: Jasper Mining Corp. has engaged Global Securities Corporation to raise between \$800,000 and \$1,500,000 by way of a public offering prospectus. Much of the money will be used to conduct further exploration work on their Vowell Creek property west of Castledale.

Rocca Resources Ltd. Acquires Domain Names -- Exploration Update

Following the announcement of the acquisition of the website, www.siegesoft.com, there has been unprecedented interest in the site. This sudden increase in traffic has overwhelmed the capacity of the current server; the Company has taken immediate steps to increase the speed and capacity of the server and anticipates the improved connections to be implemented within a few days.

SiegeSoft.com provides a solution to the increasing problem of the monitoring of movement and tracking of personal information on the Internet. Its main aim is to help the public utilize the Internet without having personal and confidential information made available to data collectors and/or marketers.

Rocca Resources Ltd. (the "Company") is able to confirm that the Company has registered a number of domain names "privatesurfing.com", "surfingprivately.com", "surfingprivate.com", and "searchprivate.com". These domain names will be utilized in conjunction with our SiegeSoft.com acquisition to build a major world-wide privacy portal.

Exploration Update: Aubyrd, Comm, Commerce, Au Properties

The Company is pleased to report that exploration of its AuByrd, Comm, and Commerce properties in southeastern B.C. will commence shortly. In total, the properties encompass 124 claim units. At the AuByrd, Comm and Commerce properties exploration will consist of geologic mapping, reconnaissance heavy mineral and stream sediment sampling, and prospecting as a follow-up to previously identified gold anomalies.

Following exploration of the companies properties in southeastern B.C., field crews will be mobilized to the Au Property near Merritt. Exploration will consist of follow-up geochemical surveys over the known gold and copper occurrences.

The AuByrd Property covers a significant portion of a large aeromagnetic anomaly which underlies the Crowsnest Property discovery of Eastfield Resources and International Curator Resources. It is believed that this anomaly may represent the center of an alkaline plutonic system. Prior exploration of the Crowsnest Property reportedly outlined a large system of alkalic intrusives where about 35 grab samples of magnetite rich, intrusive breccia averaged 8 g/t gold with values as high as 630 g/t. The anomalous rock samples were collected from an area measuring some 1400 by 250 meters, where an extensive gold in soil anomaly (greater than 50 ppb) is defined.

The COMM and Commerce Property are underlain by rocks of the Purcell Series, a Proterozoic aged assemblage of clastic sediments, dolomites, and andesitic lava flows; which have been intruded by Cretaceous alkaline plutonic rocks. Previous reconnaissance type exploration in the area outlined three major types of mineralization:

- 1) copper-silver within quartzites and redbeds of the Helikian Grinnell Formation (Redbed Type Copper, e.g. Konkola, Zambia, 421 mt @ 3.06% Cu, Dzhezkazgan district, USSR, 400 mt @ 1.54% Cu);
- 2) gold and silver associated with Cretaceous intrusive rocks, with reported gold values of over 34.28 g/t gold; and
- 3) copper sulphide bearing quartz carbonate veinlets crosscutting the Grinnell and Siyeh Formations.

The property covers an approximately 1000 m by 3000 m aeromagnetic anomaly which may outline the core of an alkaline intrusive suite. In 1991 a regional stream geochemistry survey (RGS 27) was released, which identified significant gold anomalies from most major drainages originating within the COMM and Commerce claims.

The recently acquired Commerce Property covers a similar suite of rocks as known to occur at the COMM Property. Here, prior exploration has reportedly outlined approximately 125,000 tonnes of material with approximately 1.25 % copper and up to 16 g/t silver (1985; Energy, Mines, and Resources Canada; Mineral Bulletin MR 223). Mineralization consists of bornite, chalcocite, and chalcopyrite within sandstone, shale, and dolomite host lithologies.

At the Company's Au Property, exploration in 1996 has included diamond drill intercepts of 6.55 m with 16.5 g/t gold and 52.5 m with 1.03 g/t gold and 0.95% copper, on the flank of a larger mineralized copper-gold system.
