Aubyrd, Comm, Commerce Claims (Au, Cu)

Intrusive breccias averaged 8 g/t gold with values as high as 630 g/t.

The Aubyrd 1 to 3 claims encompass approximately 10 square kilometres, about 55 km southeast of Fernie, British Columbia. Access to the Aubyrd Claims is excellent via major logging roads from the Fernie-Elko highway, and several recent seismic lines, which cross the property. About 35 grab samples of magnetite rich, intrusive breccias averaged 8 g/t gold with values as high as 630 g/t. The anomalous rock samples were collected from an area measuring some 1400 by 250 meters, where an extensive gold in soil anomaly (greater than 50 ppb) is defined. Commerce Resources Corp. plans to continue exploration and development strategies for this property and feels that it has the potential to add value and create a synergy with current property holdings.
