

Pinsent - March '96 M.R.

- Meeting with Louise Kadar of MTB to discuss new products and need to plot old NSRs.

- Placated an irate member of the public who was kicked-off the Ashlu Mine site (which has suffered more than its share of vandalism in the past). The owners have gated and posted the area and supplied a telephone link from the gate to the mine. Seems reasonable to me!

- Prepared a talk for KEG and made progress on Southwestern Region Annual Report (75% done). Many thanks to Bob Lane for his assistance in generating maps, tables, slides etc.. He will definately be missed in Vancouver.

- Held two student telephone "interviews" for resource based school projects.

- Fielded two requests for information from the film industry. One was for suggestions as to where they might site an underwater ship-wreck scene. The other was for basic information on mining and exploration in B.C. from a company scoping a four part series on Exploration and Mining in Canada.

- Query from the British Consulate about information on Mining in B.C.

- Note that in the absence of Tom and Bob there were far more general request for information than usual. These included calls for information on explosives licencing, water licencing, availability of vesicular basalt, access to hot-springs, gravel pit documentation, availability of forms on disc etc.

Robert Pinsent  
Regional Geologist,  
Southwestern Region
