→ Hub
→ Spokane
→ Taylor Windfall
→ Battlement

Galore has a 100% option or direct rights to 120,000 contiguous acres with numerous highly prospective targets for copper, molybdenum, gold and silver in the Taseko Lakes region in southwest BC.

The close proximity to Vancouver and ease of access will reduce exploration costs and provide immediate same day access for analysts and other interested parties.

The pre-approval for mineral development of Galore's properties that are within the Taseko Management Zone is a significant advantage in developing these properties.

Galore's successful 2005 exploration program has further outlined and enlarged a zone of high grade copper + 1% in soils on the Hub copper molybdenum porphyry property.

Galore will in early 2006 undertake a trenching and drilling exploration program on the Hub property. The company will also proceed with a regional geological assessment of the Tchaikazan river basin, followed by ground and airborne geophysics.

Galore will also trench and drill the Spokane copper-gold occurrences and the Taylor Windfall gold structure in addition to further exploration of the Battlement copper-moly showings.

Galore will run a geophysical and radiometric airborne survey in August-September 2006 over several promising drilling prospects and the alteration belt south of the Taseko River encompassing the Empress deposit.

Galore's Board of Directors and advisors have extensive technical expertise, considerable industry experience and a history of success. They possess vital market, industry, and government contacts.

Galore has partnered with world class scientists and students at the University of British Columbia in a collaborative research project to develop these properties.
