Aquaterre's drilling at Georgia River will test south (12 holes) and north (3 holes) of the area drilled in 1995.

Snip mine site exploration (T-West) is behind schedule due to a shortage of drill crews. Only a few underground holes have been completed. Step-out surface drilling is about to begin, likely without the benefit of underground results to constrain site selection.

Summit Lake (formerly Scottie Gold) mining proposal by Crocodile Resources including 2 000 m of new development. Ore will be hauled to Premier for milling. The company also propose to extract a 10 000 tonne bulk sample from the Bend vein (104B 132) at an anticipated grade of 61 g/t Au.

Discovery Consultants will manage drill programs at **Gnat Pass** (104I 001) and **Bam** (104G 027) in the Bob Quinn-Iskut area. The target at Gnat Pass is gold enrichment in an alkaline porphyry system and at Bam it is structurally controlled gold at the margin of the Mount Hickman batholith.

Westmin Resources will conduct rotary drilling (up to 50 holes) at **Pavey** (104M 038-047) and **diamond drilling** at **Teepee** (104M 048) gold properties related to the Llewellyn fault in the Atlin area.
