Subject: Not great news

Tom - sorry to hear about Jack Hemelspeck - I guess we all knew that he was not in great shape and that he had sold the Big Onion outright to Lloyd Tattersall last fall. In fact I had a meeting with Lloyd about the Big Onion during Roundup.

I hadn't seen Jack for a several years but this news will shake up Smithers for sure. The end of an era indeed.

Nick

Del Santo

Completed examination of Del Santo drill core. My interest is assessing potential for volcanogenic massive sulphide on this property and on several comparable prospects in the Smithers-Houston area. A sequence of bedded chert-magnetite-carbonate-sulphide exhalite occurs at the contact between dark (chlorite-altered?) andesite and sediments of the Hazelton Group. A diorite intrudes and assimilates part of the sequence, producing some epidote by contact metamorphism and bizarre chert xenoliths within the diorite. A small intersection of bona fide rhyolite occurs in 2 of the 4 holes, in close association with the exhalite. More interpretation and hopefully an article for publication to follow.

(new)

Steve Bell, Prospector Assistance grantee was visited/assisted in the field on his Palomino claims (93L 019). Excellent program on a porphyry prospect with a long but skimpy exploration history (ie. never been drilled). I offered to chase down Peter Ogryzlo, a previous owner of the property. Anyone out there know Peter's whereabouts? Field visit report completed.

Discuss/promote NWBC properties with Darrell Johnson (Hunter Dickinson Inc) and Mike Gray (Rubicon).

Loaned rock and mineral sets for use in Houston Christian school (grade 5) and gave 30-minute rock classification course to teachers' assistant, Bobbie Simon.

Big Onion

Visited Big Onion drilling program. Six holes are being drilled (currently on hole 5) on widely spaced IP targets in poorly exposed area on both sides of the Old Babine Lake Road. Three holes have encountered interesting porphyry mineralization in altered intrusive. Program budget about \$200,000. IS THE BABINE REC AREA BOUNDARY CHANGE DONE YET? If we want to stimulate exploration this is a place to start.

Thumb Peak

Thumb Peak (Smaby) drilling is nearly complete, a 6 hole program managed by Rubicon for Sand River Resources. Located 120 km south of Houston near Kimsquit River.

Participated in RG-GSB conference call- Regional Geology exploration review in Victoria confirmed. Preliminary planning for presentation content.

Registered for Yukon Geoscience Forum; to give Mining and Exploration in NWBC presentation. Content modified from Victoria presentation.

Preliminary planning for Smithers Rock Talk (March 1-3) and Minerals North (May 12-14). Rock Talk- some talks confirmed, others are probable, just one No so far. Minerals North- very active committee in Stewart, Marlin Murphy (Eskay Creek) assisting on mine field trip and technical program.

"Alteration - Guide to ore+ " course drew 21 participants and was well received. Participants were about equal mix of prospectors and geologists, primarily local. Huckleberry-Silver Queen field trip drew 21 as well. All first-time visitors were greatly impressed by the tenor of mineralization in the pit, and unfortunately in the NAG quarry, used for construction purposes.

Smithers Exploration Golf tournament was a rousing success. 68 golfers and 98 for dinner. All foursomes won a prize but had to sing karaoke style to claim it.

Drilling is underway at Huckleberry, beginning near the NAG quarry at the south end of the Main zone stock.

Reviewed Big Onion core from 1991 drilling program which is stored at Tony L'Orsa's farm. Al McNutt (Rio Algom) was examining the core, Peter Karelse was familiarizing himself with rock types prior to Consolidated Magna's drill program which is just underway. Looking for faulted offset of ore zone, testing IP anomaly.

Examined HD (Harry Davis) property of prospectors Wes Moll and Dan Merkley with Mike Vanderguchte of Rubicon Minerals. Rhyolite hosted zinc-lead and andesite hosted copper-silver mineralization. Possible VMS target, worthy of further work.
