BONAPARTE - Robert Luye - Minequest Feb. 25/88

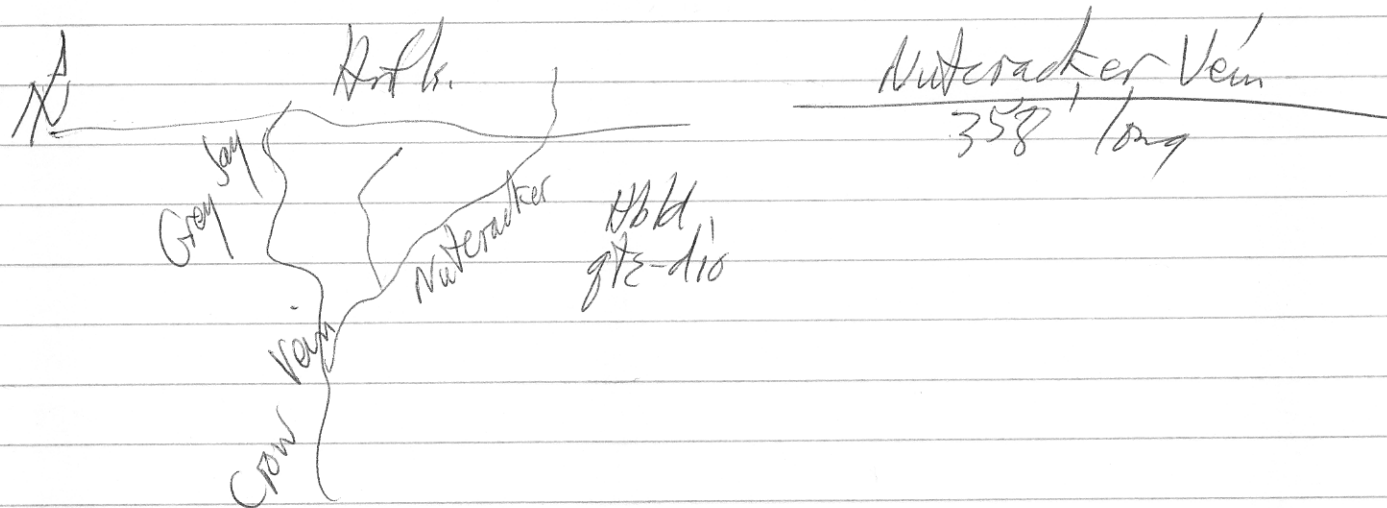

- first talk/paper
- regional silt geochem (heavy mineral) Nicola equini?
- 1984 cb. staked east of discovery zone (silt, shales + sst)
- Hot m. = Hblld gte dio. surrounded to north by hnlks.
- now 5 clusters of gte. veins - over 500m width

- Veins run N-S
Crow Vein - now 'system' of veins over 40m wide

476 ft. long (strike)

Longitudinal Section: Grade (opt) x width (ft.)

- Au down to 470 ft depth (in 1 hole)

Px, cpx, po + minor ZnS, MoS₂, Bi-Tell + V.G.
- negligible alt'n. + Au-Tell

Supergene enrichment? - native Cu, but no other real evidence!
- some sampling problems i.e. metallics

Options: West - Gallant / East - Gabriel
Discovery Zone 5000 Interpaille / Hughes Lay
