CRESVAL CAPITAL CORP.

Copper, Gold, Silver & Molybdenum in Southern British Columbia

881294

AT A GLANCE

- Exploring the large, 7,212 ha (17,820 acres) Bridge River copper project.
- Long history of exploration with significant copper showings, plus associated gold, silver, and molybdenum.
- Excellent potential for a bulk mineable, porphyry copper+molybdenum+ gold deposit.
- Phase I of a four-phase exploration program planned for 2007.

Significant Cu, Au, Mo Results

On the **Nichol** showing, 412m of diamond drilling in 10 holes has yielded significant results including:

- 3.50% Cu
- 1.00 oz/ton Au
- 0.079% Mo

over 8.5m in hole 79-S1.*

On the **Russnor** showing, significant copper values were obtained in drilling, commonly with anomalous copper throughout the entire hole.

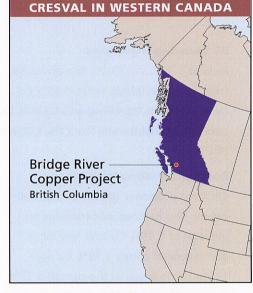

Overview

Cresval Capital Corp. is exploring its 100%-owned Bridge River copper project, situated in the Lillooet Mining Division of southwestern British Columbia. The property is located about 40 kilometers west-northwest of the town of Goldbridge, and about 235 kilometers by road from Vancouver.

Excellent Potential

"The Bridge River Project holds excellent potential for discovery of a bulk-mineable, plutonic hosted, calcalkaline porphyry copper±molybdenum±gold deposit."*

Exploration focuses on three primary porphyry copper showings: Nichol, Russnor and BR. The showings all have associated

gold, silver and molybdenum values hosted by the granitic Bridge River Pluton. The deposit model for the property is the bulk-mineable, plutonic hosted, calcalkaline porphyry copper±molybdenum± gold model. Examples include Highland Valley Copper and Gibralter in British Columbia, and Chuquicamata, La Escondida and Quebrada Blanca in Chile.

Four-Phase Exploration Program Planned

A four phase exploration program has been recommended. Phases 1 to 3 are non-contingent and would be followed up by a Phase 4 drill program.

Significant drill targets already exist in the Nichol and Russnor areas, but the initial phases would allow for more effective prioritization of drill targets. The majority of the work on the Nichol showing has focused on high grade copper veins, despite the widespread disseminated mineralization in the granite host. Further work will target the bulk tonnage potential. Phase I will require extension of the logging road for equipment access on the claims.

60 Miles

100 Kilometers

Bridge River

Copper Project

Exploration History

Significant exploration on the property occurred between 1929 and 1987, including approximately 95m of underground development, 2010 meters of diamond drilling in 25 holes, hand trenching and chip sampling. All work focused on the three known showings.

* From NI 43-101 compliant "GEOLOGICAL and GEOCHEMICAL EVALUATION REPORT of the BRIDGE RIVER PROJECT (COPPER CLAIMS)," dated March 22, 2006. Jean Pautler, P.Geo.

Cresval Capital's Bridge River Copper property lies approximately 40 kilometers W/NW of Goldbridge, British Columbia. It is accessible by logging roads from Goldbridge.

BR Showing Highlights

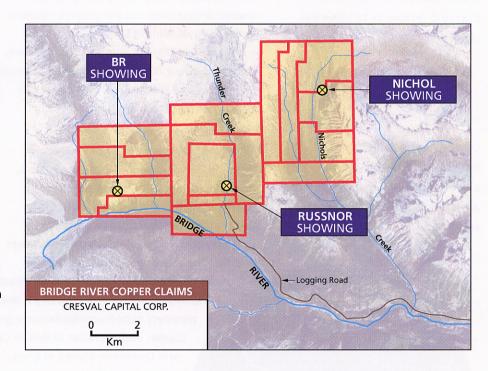

Include 1.08% Co, 0.05% Mo across 1m from quartz-sulphide veins, 0.14% Cu over 17m from trenching and 0.134% Cu over 9m ±molybdenum from the bottom of DDH 71-1.

Russnor Showing Highlights

Contains economic grades of mineralization. The Russnor adit contains an average of 1.38% Cu over the inner 30.5m (portal zone), 1.19% Cu over 12.2m (cliffs south of the portal) 0.57% Cu over 60m (cliffs 60m northeast of the portal) 1.00% Cu over 16.2m and an open cut 25m north of the portal grading 0.94% Cu over 12.8m, with minor values in gold, silver and molybdenum.

Nichol Showing Highlights

Results from the Nichol showing include, but are not restricted to: 4.73% Cu, 32.8 g/t Ag, 0.16 g/t Au, 0.015% Mo over 1m from Vein 1 in Trench 5; 8.91% Cu, 33.1

g/t Ag, 0.043% Mo over 0.6m from Vein 2 in Trench 9; and 2.08% Cu over 4.5m from the mineralized wallrock in Trench 1. Only 412m of diamond drilling has been undertaken on the Nichol showing in 10 holes yielding significant results, including 3.50% Cu, 1.00 oz/t Ag, 0.079% Mo over 8.5m in 79-S1.
