Private Placement . . . 650,000 shares at \$0.15

The VSE has accepted for filing, subject to the transaction closing no later than 45 days from June 6 1995, documentation with respect to a private placement of:

No. of shares: 650,000
Price: \$0.15
Warrants: For 650,000 shares
Wt exercise price: \$0.15 in year one; \$0.17 in year two

Places: 466540 BC

Miscellaneous . . . Escrow transfer

The VSE has consented to the transfer within escrow of 750,000 shares from John Dougherty to Stephen Grossman.

News Release . . . Brandywine drilling results

Dr Robert Lee reports

Assay results have been received from hole DP95-13. This hole is 50 ft west of hole 95-12, on La Rock's Brandywine gold property, 30 miles north of Squamish, BC.

Fire assay results from Acme Analytical laboratories are as follows:

DP95-13

| Interval (ft) | Thickness (ft) | Au oz/t (uncut) |
|---------------|----------------|-----------------|
| 18 - 28 | 10 | 2.355 |
| 28 - 33 | 5 | 0.394 |
| 33 - 38 | 5 | 1.328 |
| 38 - 43 | 5 | 0.967 |
| 43 - 48 | 5 | 1.554 |
| 48 - 53 | 5 | 0.502 |
| 98 - 103 | 5 | 0.049 |
| 103 - 108 | 5 | 0.513 |
| 108 - 113 | 5 | 0.684 |
| 113 - 118 | 5 | 0.006 |
| 118 - 123 | 5 | 0.007 |
| 123 - 128 | 5 | 1.001 |

Hole 95-14, 110 ft northwest of hole 95-13, has been completed and sent for assay.

All holes drilled at -90. Drilling continues.

News Release . . . Additional exploration planned for Montosa property

Mr Robert Willis reports

The Montosa property is in southwestern Chihuahua State, Mexico near Chinipas. Chinipas was the site of one of the earliest Spanish precious-metal mints, and later hosted the first railroad constructed in North America. The railroad was built by the British to haul ores from the mines at Pamarejo to their mill in Chinipas.

The Montosa property (approx 3,500 ha - 100% Manhattan) was staked during reconnaissance, and covers an extensive porphyry alteration system and associated breccia pipes. To date, several gold, lead, and zinc targets have been identified peripheral to the porphyry on the property. Exploration has focused on the Main zone and Mesa Montosa areas where detailed sampling of exposed mineralization and soil sampling has been completed. Approximately 700 rock and 775 soil samples have been collected with significant results.

Sixty-four chip channel samples (10 ft each) from trenches in the Main zone area average 0.049 oz/t Au, 0.30 oz/t Ag, 0.41% Pb and 1.04% Zn across a width of 66 ft. If a gold cut off of 0.01 oz/t is applied to the values, the averages are 0.077 oz/t Au, 0.37 oz/t Ag, 0.58% Pb and 1.38% Zn. The mineralization occurs in an open-pit configuration, and is exposed along a strike length of 623 ft. The zone is open to extension.

Surrounding the Main zone and continuing to the south to include the Mesa Montosa area, a soil anomaly 2,300 ft (north-south) by 800 ft (east-west) has been identified. This target is anomalous in gold, silver, lead, zinc, and copper, and is open to extension. At its southern boundary, the higher grade core to the soil anomaly is 330 ft wide, and averages 0.026 oz/t Au. The highest soil value detected is 0.12 oz/t.

At least three other mineralized targets occur on the property - Northwest Vent, Mexicana, and South Porphyry. At Northwest Vent 15 samples target a circular anomaly 325 ft in diameter averaging 0.274 gm/t Au. The

Dissected & listed in June - "good-looking ore pipe" -> 90 u/g next!
