

BRASSIE ck. Mon. Sept. 27/99

Cloudy + 16°C

- just south of Wallachin
- with Mike Cuthro
- Ab Ablett (Christopher James Gold Corp.) + Ron Wells

BRASSY CK

- Craigmont-type target for XRS.
- Last yr. + this yr. - found mineralization more like a mantle-style (polymetallic)

Budget - \$70k

Border phase Guichon bath. into Triassic st.

(Supertest 1970) → BP ~ 1974

- 1970's - limestone - Craigmont target
- massive magnetite lenses in 1st
- (Cpx + Ag + Pb - Zn)

eq. 0.2 to 3% Zn

NW structure

- orig. Brassie ck. showing c 70° dip = 67% Fe (+ Cpx)

- new <sup>skarn</sup> showing (discovery) in 1999 on west side of Brassie ck - up to 10% Au + terrhyrite (Co) (+ Bi, As, Co !!)

mass occurrence to NE of Brassie

CONFID. 99-03 drilled a 10" slipcase  
to 98 hole which intersected  
min. zone (see Press Release)

= 20 values i.e. '98 hole  
drilled down min.

99-04 - silic. 1st box } up to  
99-05 . } 1% Zn

Adit - incl. tetrahedrite  
+ rhodanite

Marble (+Zn)

Silic. Bx. Zone (all over wide)  
+ Zn! + py
