Contact of shear zone - FW
tuffs + dyke

* see SW
July 11, 1996

1200 to 168 opt Au
(from Liquid Gold 4/6 program '95-'96)

at + at end
- 75m
below surface

1230-1240m - best Au

locally - up to 30m zone of lower-grade
min. in FW tuffs
RW vein

29m @ 1.24 opt Au } strike
of 53m @ 1 opt Au } lengths

To date - stockpiled - 200
tons of ~1 opt Au from RW.
Wein - to be shipped July 9th
to Trail for processing. A
further 300 tons to be mined
by open cut @ 1.25 opt Au over
RESTRICTION

BRETT - mt 825W084

July 7/94

tour by Warner Gruenwald +30°C
(on behalf of Huntington; NOT Liquid Gold)
est. 30,000 ft. DDH at core shack

1205 m level - proposed portal
(on Bonanza zone)

1100 - 1300 m - can find min.

"best" = 85 m 'Middle Unit'

200 m strike (up to 800m)
total

En'l Lugard - rpt (private/confidential)
12,000 tonnes @ 1.1 gpt Au
(above 1205 m level)

RW Vein (named after Ron Wells?)

located along strike of Main Shear zone near break in slope
(ip. @ 9+60N, of. 6+30N at portal)

- 1993 drilling to 30 m depth.

- good 'angel-wing' CFS-bladed calcite texture in gtz. vein (photo).

② Photos: Bonanza vein - portal site
a) look S b) look N 1205m

② RW vein - a) look W
b) cise-bladed calcite

-
- idealized x-sec. (see file)
 - consistent normal faulting (up to 40 ft.) - 'marker' fault horizon

- typical epithermal model plus low grade Au in 'permeable' fault (esp. in FW)

- Esp. for dykes spatially related to min. (i.e. last gasp)

- valley bottom 'cored' by 'spentite' (Whiteman ck. stack) intrusive to ^{Agropagan} batholith

- East zone - 'new' discovery (down slope)

③

two old adits across
'contact' cr. (to east)
in intrusive ex. → possible
mesothermal-type

- No Tellurides (Chemex)

- increased chromium
(in mica or from ultramafic
slice)

GOLD STAR - adit to west
- Brett-type target

- Volcanics become coarser-
grained from E → W
(ie tuffs → agglomerates)

- Huntington optioned this Spring
from Murray Morrison

(OVER)

- W197
NEWSPAPER CROSSING
- sig. land use / First Nation's issues
 - "hassle" over selling pond (from Forestry) - see photo
 - constructed by Wayne Ash
 - excellent road construction, partial site prep. (by Kelgung Contractor)
 - definite "rift" between Huntington + Liquid Gold.

BRETTAug. 3/88
Sunny +30°C

- Werner Gruewald
- Lori Walters
- Charlie Brett - Lucky Seven
- Dave Mitchell - Kelowna - Cons.
for Lucky Seven (C. Brett)

Basaltic-andesitic 'flows'

up to
40m
thick

rise to fr. gr. andesitic
tuffs

- HW not yet observed
- 4 tuffs units identified to date

Send Charlie Brett copy of 'group' photo
