- NEWS RELEASE -

November 29, 1996, - V.S.E. - HUN, - S.E.C. Exemption No: 82-1374, - O/S 6,691,596 - 1996 - 14 Permits in Place:

The company has now secured the required permits from the Province of British Columbia to begin the underground development of the its 100% owned Brett Gold Project near Vernon, British Columbia.

The work program will begin Monday, December 2, 1996, and will include driving an approximate 90 foot raise in the hanging wall, parallel and 50° along the "Main Shear Zone", and the development of three crosscuts into the "Main Shear Zone".

Financing Completed:

Huntington Resources Inc. has negotiated a private placement in the amount of \$120,000.

Earlier drill programs have evidenced high grade intersections of up to 2.95 ounces of gold per ton in this area. The three crosscuts have been designed to intersect these drill holes at the high grade intersections.

The company will issue 375,000 units at a price of \$0.32 per unit. Each unit will consist of one share and one non-transferable warrant. The warrant will be priced at \$0.40 and will have a term of one year. The closing price for the company's stock on Friday, November 29th. was \$0.37.

Following sampling and assaying the identified ore blocks will be mined and stockpiled. The estimated ore reserve in this area ranges up to 11,000 tons, grading 1.141 ounces of gold per ton.

The ore will be shipped to Cominco's Trail smelter.

Both the share and the warrant will be eligible for Canadian Eligible Exploration tax deductions.

Huntington has made two ore shipments from material mined from near surface veins so far this year that assayed approximately 1 ounce of gold per ton.

Work Program Scheduled:

Running Fox Resources Corp

- Advancing a high grade gold property in British Columbia
- Significant Properties being reviewed for acquisition
- Fully funded for the exploration season and new acquisitions

Getting Set To Drill

Running Fox Resource Corp holds an option to acquire a 50% interest in the Brett Property situated in the North Okanagan region of British Columbia.

The property is located approximately 29 kilometres West of Vernon in south-central British Columbia on the west side of Okanagan Lake. Vernon is approximately 400 km northeast of the city of Vancouver.

Exploration work carried out to date on the Brett Property has confirmed the presence of a number of significant gold bearing mineralized zones associated with northerly trending altered shear/fracture zone(s). Previous work consisted of geochemical surveys, trenching, 10,000 meters (32,900 feet) of diamond drilling, 2,800 meters (9,300 feet) of reverse circulation drilling, and 459 meters (1506 feet) of underground development.

The majority of work has been concentrated in a small area (200m strike and 76 meters depth) of the property, along what is known as the Main Shear Zone - RW vein. The last hole drilled on the property Hole 93 - 19, a reverse circulation hole, returned an intersection of 16.76m grading 35.79 gms Au/tonne (1.045 oz Au/ton) including 3.048m grading 57.88 gms Au/tonne (1.69 oz Au/ton) and 4.57 m grading 107.88 gms Au/tonne (3.15 oz Au/ton) within the Main Shear Zone.

In 1996 a small (291 tonne) bulk sample, from the RQW vein and Main Shear Zone, was shipped to Trail and returned an average grade 27.74 gms Au/tonne and 63.7 gms Ag/tonne. Work was stopped in late 1996 and the property was tied up in litigation for several years.

To date, the Main Shear Zone has been traced for a strike length of over 1300 meters and down dip to a depth of 150 meters (possibly as deep as 500 meters, based on a single hole drilled on the neighbouring property) and is wide open in all directions. In addition to the Main Shear Zone, the local geology and geochemistry indicates excellent exploration potential for developing other mineralized zones.

The Brett Gold Property has 157 drill holes, mostly on the Bonanza Zone which covers only 700 feet of the 4,500 foot Main Shear Zone (traced strike length). TO date there are five mineralized gold zones identified on the Brett Gold Property, with an additional untested 25 gold anomalies.

Running Fox has analysed exploration and bulk sample records, including smelter receipts, and will be conducting a comprehensive drilling program to advance the Brett Gold Property.

NEWS RELEASE

June 9, 1988
FOR IMMEDIATE RELEASE
LACANA EXPLAINS DRILL RESULTS FROM BRETT PROPERTY

Lacana Mining Corporation (LCA-TSE,ME; LCNAF-NASDAQ) reported today that reverse circulation hole RC 88-11 on the Brett property was drilled down or along the dip of the main shear zone to test for vertical continuity between three drill intersections.

These earlier reported intersections had the following results:

hole 87-29 17.2 feet of 0.737 ounces gold per ton;
hole 87-47 3 feet of 0.98 ounces gold per ton; and
hole 87-30 17.1 feet of 0.092 ounces gold per ton.

The attached cross-section shows these holes along with hole RC 88-11.

Previously, Huntington Resources Ltd., the operator of the project announced assay results from hole RC 88-11 of 2.03 ounces of gold per ton over a length of 235 feet.

On this property, 25 kilometres west of Vernon, British Columbia, reverse circulation drilling was utilized in the early part of the 1988 exploration program because of poor core recoveries and drilling difficulties encountered in the main shear zone last season. So far, incomplete assays results from other reverse circulation holes have indicated reasonable correlation with previous core results.

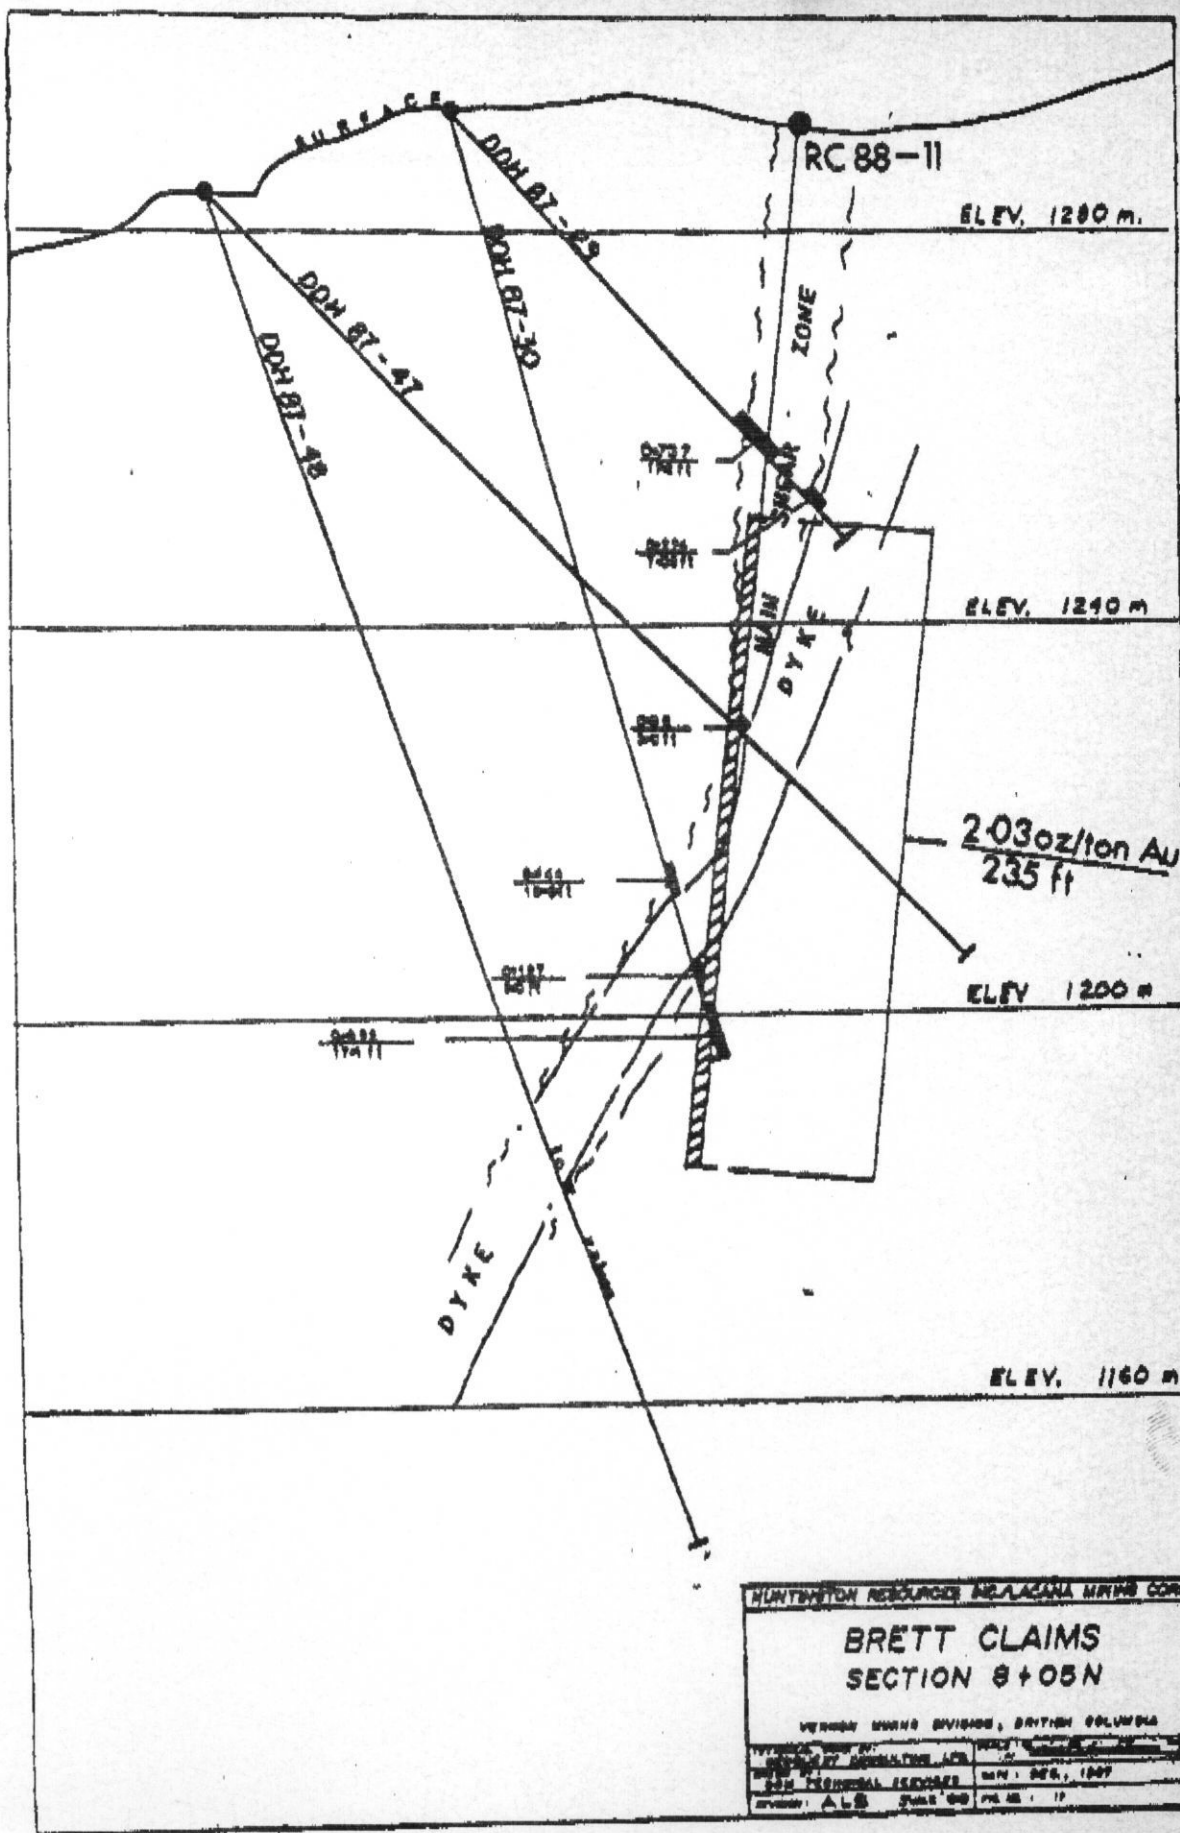

The area around the RC 88-11 intersection is currently being core drilled on 50-foot centres to better define the shape and extent of this high grade ore zone. The Brett property hosts several other promising exploration targets which will be evaluated during the current drilling program.

Lacana can earn a 51 per cent interest in this property by spending a total of \$500,000 prior to December 31, 1988.

HUNTINGTON RESOURCES INC.

NEWS RELEASE
 1988-3

JUNE 7, 1988

Trading Symbol: HUN
 Shares Outstanding: 2,020,000

The Huntington Resources - Lacana Joint Venture on the Brett Property west of Vernon wishes to announce a truly exceptional gold intersection. This intersection averaging 2.03 oz/T gold over 235 feet comes from a recent reverse circulation hole RC-88-11 drilled on the Main Shear Zone.

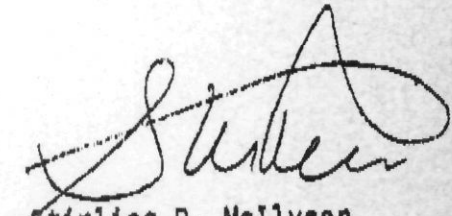

The hole was targeted to test the continuity of high grade gold mineralization intersected by three diamond drill holes in 1987 (previously reported) on section 8+05N. This was achieved by drilling through and beyond these core intersections. The mineralization is largely in the footwall to the Main Shear Zone and includes an upper higher grade section of 145 feet averaging 2.95 oz/T Au with much visible gold and a section beneath with 90 feet averaging .548 oz/T Au. A summary table with details of individual assay sections follows.

Intersection In Feet	Average of Gold Assay in oz/Ton	No. of Cuts From Reject	Coarse Gold
130-135	.13	2	Y
