**DATE:** March 6, 1998  
**PAGES:** A whole bunch! (11), including cover sheet.

Hello John,

## CONFIDENTIAL

Here are the drill logs for CA-DD9801 to CA-DD9807. Any questions....please feel free to call me. I think the logs and the mini-report match!! I hope to continue on this program. There is exceptional potential for both high-grade quartz veining AND for lower grade, larger-tonnage "replacement" mineralization in the silica-phyllitic alteration zones and stockworks.

All we need is the OK from Paul. Talk to you soon. Take care.

From the desk of...

**Philip van Angeren P.Geol.**
