As you may be aware curragh has approached the Province for assistance with the development of infrastructure for the Cirque (Stronsay) project. They primarily want assistance for the development of the road. they argue that as well as forestry they see future users in the area in the minig industry. I know they have talked briefly to tom about this but we don't have good information on what the liklihood or real potential of the area is. Are there potential other users that could develop a minie and use the road for shipment during production in the near future. We can only begin to think of assistance on the basis of multi use. Is there a simsilar potential as is the case in the Iskut?

your thoughts on this would be greatly appreciated - Asap as usual.

Many thanks Brian Parrott
