RE: CLONE (Red, C-2) Property

Sorry for the delay in responding - better late than never.

The attached print out for 103P249 should be separate

from the CLONE (Red) property. I've attached some background info, if you haven't already proceeded

along this track. The CLONE is a "very significant"

~~deposit~~ deposit; it might even have a geological resource attached to it by year's end? Also - check Explore BC (1995/96 plus new (1996) A.R.

Hope this helps.

cheers,
Jan
