

CROWSNEST PROJECT: OVERVIEW

EASTFIELD RESOURCES LTD.

❖ COMMODITIES AND DEPOSIT TYPE

882137

Roundup 2000

- ◆ **Alkaline Intrusive Related Gold:** e.g. Cripple Creek Colorado, 21 Million oz. Gold.

❖ STATUS

- ◆ 199 claim units (12,000 acres), 100% owned by Eastfield.
- ◆ International Curator Resources Ltd. may earn up to 75% by making cash payments of \$500,000 and funding exploration expenditures of \$3,600,000 over five years.
- ◆ Approximately \$450,000 was spent on exploration in 1999.
- ◆ Trenching and diamond drilling recommended for 2000 program.

❖ HISTORY

- ◆ The property was acquired in 1998 and optioned to International Curator in 1999.
- ◆ Previous exploration outlined a 1400 x 250 meter soil gold geochemical anomaly that was determined to have been transported down valley.
- ◆ Numerous mineralized intrusive boulders have been located in the glacial till overburden that assay up to 18 oz./ton gold (630 g/T) and usually in excess of 2 g/T.
- ◆ 1999 exploration outlined large geophysical anomalies up-ice from the geochemical anomaly; drilling of ten holes determined the existence of a large altered intrusive complex with anomalous gold over 40 to 50 meter intervals in two holes.
- ◆ Trenching encountered an altered intrusive into carbonate host rocks that assayed 0.24 oz./ton gold (10.60 g/T) across 16.5 meters.

❖ POTENTIAL AND PLANS

- ◆ Alkaline intrusive hosted gold deposits have significant potential to host multi-million ounce resources; the Crowsnest project fits well into this deposit classification by virtue of trace element and host rock chemistry (elevated bismuth geochemistry).
- ◆ The large volume of mineralized boulders and altered intrusions discovered to date, along with the high grade gold encountered in trenching indicate that extensive gold mineralization exists in the 1999 grid area, which is largely overburden covered.
- ◆ Exploration in 2000 will continue to test the prospective 1999 grid area.

EASTFIELD RESOURCES LTD.

CORPORATE STRUCTURE

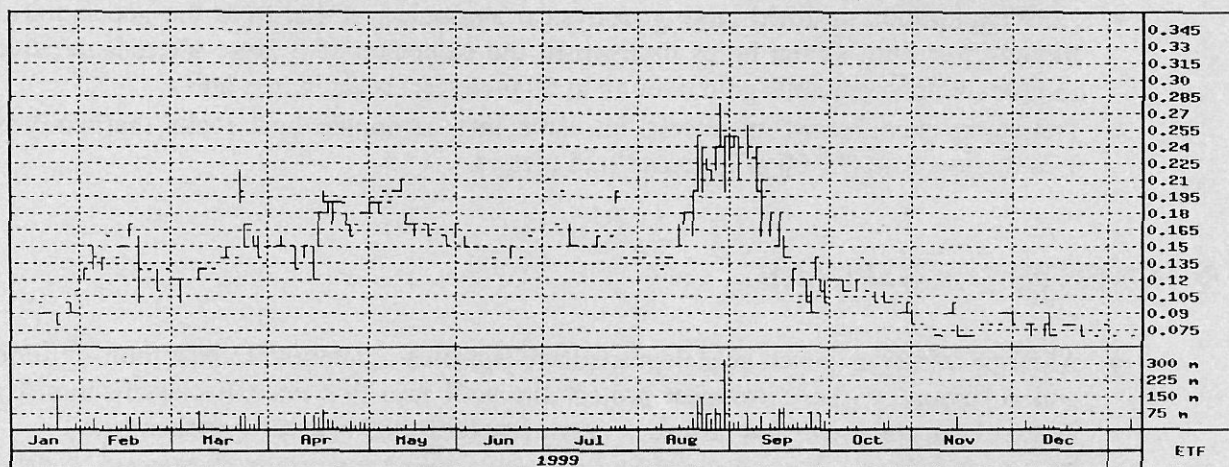

❖ SHARES OUTSTANDING

- ◆ Undiluted: 13,692,351
- ◆ Fully Diluted: 19,116,351
- ◆ Held by Management (fully diluted): 4,900,000 shares (25.6% of fully diluted)

❖ FINANCIAL INFORMATION

- ◆ Total Assets: \$1,510,704
- ◆ Working Capital (includes marketable securities excepting Alexis shares): \$203,582
- ◆ Major Investments: 1,067,200 shares of Alexis Resources Ltd.
- ◆ Warrants: Of the 4,292,000 share purchase warrants outstanding (most expire this year but one third expire in 2001) the exercise prices range from \$0.20 to \$0.70/share for an average of \$0.45/share. If fully exercised, the warrants would yield \$1,944,650 to Eastfield's treasury.
- ◆ Overhead and Operating Cost Projections: (financial requirements): For nine months to November 30, 1999, admin. costs totaled \$50,239 while income was \$21,768 for a net loss or "burn rate" of about \$3,000/month. This is a fraction of the operating costs of exploration companies with our level of activity.

❖ STOCK CHART

❖ ANNUAL PRICE AND VOLUME RANGES

Year	High	Low	Principal Exploration Activity
1999	\$0.28	\$0.07	Crowsnest Gold Project – southeast British Columbia
1998	\$0.44	\$0.03	Fort Copper-Molybdenum project – northwest B.C.
1997	\$0.90	\$0.06	Tonopah Project – high grade silver-gold, Nevada
1996	\$2.50	\$0.51	Tonopah, Nevada and Labrador Nickel
1995	\$1.00	\$0.18	Tonopah, Nevada

Geologists Glen Garratt and Jim Ryley on the Crowsnest property

FORT PROJECT: OVERVIEW

EASTFIELD RESOURCES LTD.

Roundup 2000

❖ COMMODITIES AND DEPOSIT TYPE

- ◆ **Copper-Silver Porphyry:** e.g. Granisle: 53 Million tonnes grading 0.40 % Copper, 1.32 g/T silver and 0.13 g/T gold, Bell: 77 Million tonnes grading 0.40 % Cu, 0.36 g/T Ag and 0.17 g/T Au.).

❖ STATUS

- ◆ Eastfield has the right to earn a 100% interest in 272 claim units (17,000 acres) from local vendors.
- ◆ Skygold Ventures Ltd., an Alberta company, has taken an option to earn a 51% interest and will undertake a drilling program in 2000.

❖ HISTORY

- ◆ Local prospectors discovered significant copper mineralization in a new logging road cut in late 1997 and approached Eastfield; an option was struck in early 1998.
- ◆ In 1998 an extensive geochemical, geological and geophysical exploration program, funded by a third party, resulted in the outlining of two large, coincident geophysical and geochemical anomalies measuring 300 m x 600 m and 350 m x 800 m.
- ◆ Government and company mapping has shown that intrusions on the Fort property are of the same age and type as at the Granisle and Bell mines on the other side of Babine Lake.

❖ POTENTIAL AND PLANS

- ◆ The geophysical/geochemical targets are large enough to host significant resources of copper-silver (molybdenum).
- ◆ The relationship of these anomalies to Babine type intrusions on the property lends solid support to the mineral potential of this new discovery.
- ◆ The area is relatively flat and is well serviced by logging roads, which have recently connected the area to Fort St. James.
- ◆ A drilling program will be initiated in early summer, 2000.
