DAYTON SOUTH CAMP [MI-82ESW022,023]

On May 7, 1996 I accompanied Trygve Hoy, Gerry Ray, Larry Jones, Mike Cathro and Paul Wilton to the Dayton South Camp. John Chapman, Gold City Mining, acted as tour guide. We very briefly examined the LeRoi garnet-chalcopyrite-pyrite-wollastonite skarn zone which had just been reclaimed after a 4-hole diamond drilling program in January, 1996. Immediately to the north, Winslow Gold Corp. completed a short diamond drilling program on its skarn prospect. Gold City also drilled the Nighthawk prospect, adjoining to the north of Winslow's ground. The entire Dayton-Nighthawk trend is part of the larger northerly-trending Rock Creek Trend.
