DOT (VIMY)

Oct. 24/97

MNT 92TSE023

Cloudy + 10°C

- with Bill McMillan

- Alhambra Res. (Calgary) - Elmer (geol) + Gary Stewart (Prob. 51%) [Taro all + Gary]

- Core inside at Merrill Machine Shop

- Larry Ovington (49% - ex-owner) Kamloop

[Alhambra needs to make deal with Ovington to continue]

- Vancouver Petrographics study/rpt.

New Southeast Zone is SE of Vimy showing.

NW-SE strike to structurally-controlled zone
py, cpy, bn, native Cu + to MoS₂

"Granodiorites"

Alt'n: Kspar; chlorite; sericite;
saussurite; kaolinite; magnetite/sphalerite

- minor qtz veining (+ cpy)

- Look at both 96-16 - towards bottom

native Cu - both on fracs/veins + dissgm

Potential - à la Bethlehem - several zones of 20-30 m tonnes of ore

Bn; Cpy ~ 90:10 Bn in veins + replace matrices

- Virtually no pyrite

Au - up to 5 g/t; tr. electron in this section

- Look at 96-10 and 11 (MoS₂ at depth)

882411

- 'new' native copper 'zone' ~ 50m west
of SE zone (an echelon structure)

[Springer doesn't have much 'respect' for
geology — goes right after the mineral
in drills an area, before really looking
at all of the pieces/clues].

→ Sa. from 97-04 — native Cu in fracs
+ dissem.

[Cominco + Teck have looked at]

⇒ Need to: ① diamond saw core
② strain core for ksp or

- very LOW-SULPHUR ^{oxygenated} system
(i.e. no py; ab. bn / native Cu)

- 97-03 + 04 — 'high-grade' bn + cpY

1996 = \$300,000

1997 = \$156,000
