

DUDE

Wed. Oct. 12/05
Rain/Wind
+12°C

- Hosts: Pathfinder Res.
- Vic Tanaka
- Dick Atkinson
- John Peter (in site geol.)

Phil's Drilling

Fly KD Air from South Terminal 5604-688-9957 (-285)

- Sheared (sheeted) Porphyry Cu-Mo ± Au deposit
- Planned 1500m ~~drilling~~ drilling (= 47m)

1969-1970: Falcon bridge - 6 shallow dth totalling 490m - zone over 1 km diam
 Cu: 50-400 ppm; Mo: 10-40 ppm
 [Au in bedrock up to 45t]

- good correlation between IP + soils (Au)
- [1.2 km X 600 m wide target]

Moving to hole #5 see Handout

Host rock = Bio-hld granodiorite (magnetic) [à la GAMBIER IS.]

- veinlets (dry) + qtz ± cp
- ± py ± Mos₂

- epideite all h most common;
 minor Aspor.
 - Access hole > 800ft.

- Very hard to distinguish cp with py (i.e. will be assay control)

examined core @ Bob Duker's 'mill' area

UNIVERSITY OF CANADA

882426

Tue./Wed.
Oct. 3/4 '00
Sunny + 15°C

① TEXADA ISLAND

- meet up with Jacques Houde
- fly with KD Air (South Terminal)
- Van → Qualicum Bay → Texada

[ex-Norhair] Daryl Clark (Powell P. North St. Mining)
Bob Duker (PAA) ~~George~~ George

① ~~New photos~~ 1000 T taken out of pit
this yr. → old-Bolyat mill (metals Research GP.)

② JAK - Au target (steep)

- sheared in Karmutzen and photos - old (1980's) Cariboo Gold Qtz Co. drill holes ⁴ by road - fence p/b road
- sb. chlorite + Qtz. veinlets
- mainly cpy + fr. bn + Fe-carb.
- old "ANGEL" property

[Echo Bay sampled] "Hammer Mill"

- Shearing @ 160°, veining @ 060°

"pieces" of gdd → "bulk sampling" i.e. crushes + pans for free ^{no assa}

→ "Recent" rd. building (forestry) has exposed shear zone (Fe-carb.) along roadside (> 1 km) → needs to be systematically channel sampled!!

97
① Drive S down rd. over crest
towards water

* Stan Beale just consummated
deal on Van Ande 'camp'

~~92F~~ ~~Van Ande~~ ~~Falconbridge~~ ~~Van Ande~~ ~~Files~~ ~~1970~~

DUDE for showin Oct. 4/00

- SE side of Texas Jc (Jurassic)
- upslope from Long Beach

Host = hold granodiorite with
veinlets of py / cpx

(also, cpx in gtz veinlets - $\frac{1}{2}$)

- magnetic 1 inch

- sheeted nature of veinlets
@ 065° W

Alt. - weak chlorite

Photo: 2" gtz vein cutting
sheeted py veinlets

[Analogy: [ATFACE]]

- ex - Falconbridge / Bob Michel
+ Echo Bay - silt sa.

Falc. pmbate
gpts (H. geophy)
falc. in mud

③ Locate totally-overgrown old Falconbridge camp + "AX" core photo (est. ~ 1600 ft?) — see: Falc. rpt.

- continue to drive up rd. — crossing into (Karmutsen) volcs with stringers of py ± gtz (blasted pit(s))

"Beach" showing just below "Hydro East" — blasted from cpy in gtz vein + Got photo

NEW Project — ex-Bolivar mill

- Metals Research Co. Corp. 555

~ 50 barrels of 'concentrate' on site. Venturer, mill feed (stockpiled) looks like lot of dilute

Bob Duker's 'mill' — incl. Wilfey table + sluice box

photos — crush to -60 mesh, then pan on saucer (plate) — vol?

→ runs store in Vananda

→ Met Ken Konklin + wife + Rory (Powell R. → Texada Is. ferry captain)

- Victoria showing.

- pit by priest (+Au) host = Cd.

Note: Private Falconbridge
reports in Van. MDC
have good data
(geophysics, geol., geochem,
adh)

⇒ discouraging results!!
(av. 0.05% Cu + tr. Mo)
