

E+L (Nickel Mtn.) [a 2.7m tons @ 0.8% Ni] Oct. 11/90

- John Thompson

- appears to intrude Salmon River (Equiv.) rx. (no Dilworth)
- gabbroic hosts (olivine-rich)
- possible 'cross'-layering (eg. à la Duke Is., Alaska)
- sedimentary, cumulate textures → could original be garnet?
- 'fantastic' orbicular textures (ref. - Hancock (1990) - GSB)

Min. po, pentlandite 'blebs' (high water content)
 cpx rims po blebs - very rare!!
