- Hole 22 - 0.44% Cu - over 12.2 m
- Hole 24 - 0.65% Cu - over 15.2 m
- Hole 43 - 0.95% Cu - over 17.8 m
- Holes 60+61 - > 1.00% Cu - over 1.16 m
- Hole 55 - 6.87% Cu - over 6.3 m
- Hole 69A - 21.29% Cu - over 0.76 m
- Hole 66 - 4.9% Cu - over 1.28 m

LEGEND

- Induced Polarization Anomaly
- > 60 ppm Cu, Values Range to > 1700 ppm Cu
- > 2.9 Mo West Grid
> 4.5 Mo East Grid } Values Range to 255 ppm Mo
- 20 ppb Au, East Grid Anomaly
- D.D. Holes

EAGLEHEAD PROPERTY

British Columbia, Canada

Far East Zone:
Soil sampling has identified significant values of Nickel, Gold, Platinum and Palladium

Total holes drilled to date:
69 over a distance of 7 km

EAGLEHEAD PROPERTY

British Columbia, Canada

PAST HISTORY

Past exploration on the property was undertaken by Esso Minerals Canada Limited in 1982 before it was acquired by Homestake Canada Inc. Homestake allowed the claims to lapse and these claims were acquired by Carmax Explorations Ltd. A total of 69 holes have been drilled on the Eaglehead property to date with all but 4 holes showing excellent mineralization. Drilling has shown values from 0.2% copper and 1.0% copper as high as 2.0% copper over the 6 plus kilometers drilled to date. The Pass and Bornite zones host extensive areas of mineralization as shown by the drilling carried out to date. Further drilling will only increase the size of this large copper-molybdenum-gold-silver porphyry deposit.

Of interest is the Far East Zone which had an IP survey carried out and Geo-Chemistry showing significant values of Nickel, Gold, Platinum and Palladium.

Due to the massive anomalies in this area showing the above metals the Company will focus more attention to this area this coming year.

Carmax's management and director's are highly experienced mining professionals with over 100 years of combined experience. Their excellent track record includes being involved in production in Nevada, British Columbia and Australia.
