ELF [MI94F011]

On Tuesday, July 23, 1996, Bob Lane and I (with Paul Baxter, Inmet) briefly visited the Elf sedex deposit, examining the 'upper' showing (see photos). [Note: the previously drilled core racks in the swamp near the Akie River had slumped but should be recoverable. Teck/Cominco have proposed exploration budgets for the past 2 years; unfortunately their partner, Samsung, has not become involved, resulting in NO work being done. This prospect still offers good exploration potential].
