<u>OLIVER GOLD CORPORATION</u> - (V-OGO)

Solomon currently owns 2,000,000 (42%) of the 5,394,592 issued and outstanding shares in Oliver.

Fairview-Stemwinder 882843 VOS May'90

Oliver's primary asset is it's 100% interest in the Fairview Property five kilometres west of Oliver, B.C. The property is comprised of 35 crown granted claims and ten recorded claims (45 units) covering an area of 1,586 hectares.

To date over \$1.3 million has been expended on underground rehabilitation, surface drilling, trenching and sampling.

A recent pre-mine feasibility study concluded that drilling to date has delineated a mineral inventory of 1.8 million tons grading 0.140 oz/ton Au and 1.3 oz/ton Ag with potential to double these reserves with additional drilling.

Oliver is currently seeking a joint venture partner who would be interested in participating in developing the Fairview Deposits.

Oliver Gold Corporation recently formed a 50/25/25 joint venture with Aber Resources Ltd. and Tanqueray Resources Ltd. to explore for precious and base metals in the Kitsault area of B.C. (40 kms southeast of Stewart). The Kits-Jade Project focuses on a 30 km linear belt of intermediate to felsic volcanic and epiclastic rocks thought to be regional scale correlatives to the Betty Creek and Mount Dilworth Formations.

The project consists of three primary exploration targets: 1) the Kits stratiform volcanogenic Zn-Pb-Ag prospect at Kitsault Lake; 2) The Frog-Pacific Silver high grade Ag-PB-Zn quartz veins southwest of the Kits and; 3) the Jade-Skuch claims staked to cover 25 kms of favorable geology to the southeast.

Geochemical sampling during the 1989 field season identified several new exploration targets (see attached map). A more extensive field program is planned for 1990 including: detailed followup of established anomalies; geophysical surveys in the Frog-Pacific Silver area; additional geochemical sampling and prospecting; and possible diamond drilling.
