

FINLAY CREEK

Nov. 12/98

- chat with Eric Finlayson (Keneco)

- Last hole (#5) in 5-hole, 1998 program was drilled ~ 300 m downslope & down dip to the NE (NW?) of Tourmalinite Ridge.  
(in the trees) [cf. previous Ken Addison drilling (2 holes) on top of ridge on 'tourmalinite']

→ "significant" (no assays released) mineralization intersected at depth of ~ 150m (i.e. much higher in the section above the Sullivan horizon) ⇒ new potential recognized regionally!  
collated in crest on Emma rx. & drilled into Aldridge Gp. drill hole #5 e-70°

- No 'joy' in 4 holes drilled to south on Findlay Ck.

[Note: pending (confidential?) option on Greenland Gp.]
