

FRANKLIN MTN.

July 31/01

- tel. disc. with Jim McDougall
(^{'Longdale' - after Dick Longdale?})
- Private Syndicateⁿ flew an airborne geophysical survey over area in March, 2001, principally looking for PGE targets.
- JM identified several; but, syndicate hasn't yet followed thru (ie. company listing?)
- good anomaly over original PE producer - MAPLE LEAF
- (JM says some of the anomalies are not related to PGE targets i.e. other potential)
