NEWS FLASH: GOLD MOVES THRU \$360 AS THE US DOLLAR CONTINUES TO WEAKEN

Tuxedo Resources Ltd.

(TUX) on the TSX Venture Exchange
Shares issued: 7,867,486

Exploration for a high-grade gold deposit has begun on Tuxedo's B.C. property

"Field work has commenced on Tuxedo's Franklin Project located 60 kilometers north of Grand Forks in southern British Columbia..... detailed prospecting, geological mapping and rock sampling, combined with probable geophysical or soil geochemical surveys will be conducted to define specific targets for follow-up excavator trenching and diamond drilling in the first phase program.

A large area of widespread epithermal-type gold mineralization was identified in 1986-1987..... Placer reported that "the greatest potential for a high grade Au-Ag deposit of the Union Mine type lies in the depth potential of a number of interconnected silicified faults which outcrop on the Homestake and Deadwood claims." Placer was unable to complete follow-up work on these targets, largely because of complications resulting from inability to secure tenure to all crown grants in the area of interest. Tuxedo retains all mineral tenures in the area..... Kinross' recent Emanuel Creek discovery (Echo Bay – Kettle River Mine), located approximately 75 kilometers southwest of the Franklin Property, is a high-grade preserved epithermal gold deposit (e.g. 104 feet of 1.28 oz/t Au) being fast-tracked to production. The mined out portion of the Union Vein on Tuxedo's property was an epithermal vein similar to Kinross' new discovery..... the current program is designed to test for similar deposit types on the Company's property."

The Tuxedo story is very simple..... this high-grade gold exploration play is based on the theory that the Tuxedo property has identical geology to the Kinross discovery property.

Previous high-grade production on Tuxedo's property gives an indication of the possibility of similar deposit types.

Drilling is expected to begin before the end of June, with trenching results available sooner.

Tuxedo went public this spring at .25 and the stock has drifted lower waiting for the exploration season. Now that exploration has begun, this situation will change.

As in all speculative exploration plays, accumulation of the stock prior to results usually generates the highest returns..... watch for trenching results in June.

Call 1-866-889-3363 to receive up-to-date exploration results.
