Subject: Bell to Drill Granduc & Leduc Silver in May

As posted on Goldeditor.com - Bell to Drill on Teuton ground in May 2006

<http://goldeditor.com/articledisplay.php?id=830>.

Granduc Project - North Western British Columbia Cu / Ag / Au / Co

- Copper-rich, easily accessible deposit with surrounding infrastructure
- Historic resource of 550 million lbs. grading at 1.73% Cu (1969 non-43-101) Approximately 200 million lbs. of copper based on historical resources remain in place at an average grade of 1.84% (BCMInfile non - NI 43-101)
- Conceptual Target: 20-50 million tonnes of ore grading +2% copper plus credits

Fall 2005 Phase I Program Highlights

- Significant copper intersections of up to 3.92% including: 25.5 ft. of 2.57% Cu, 24.9 ft. of 2.21% Cu
- Ore zones have been extended at least 800 feet southward along strike from historically mined areas. Copper grade, thickness and byproduct metal grades in the down-dip and to southwest increase with depth and are open to extension in these directions
- Drilling focused on less than 10% of the current 3.5 km strike length of the deposit

May 2006 Phase II Drill Program Objectives

- Further extend mineralization to the south
- Add to North Zone mineralization
- Test the recently discovered Pollux geophysical target

Subject: Bell Resources Updates 2006 Plans

Bell Resources has issued a news release updating Granduc project which includes **Teuton's Leduc Silver claims**. Excerpt of Bell News release posted below.

Full news release @ http://new.stockwatch.com/nocomp/newsit/newsit_sedardoc.aspx?docid=1003784

Granduc -- British Columbia -- Cu, Ag, Au

The unlocking of the enormous potential along with continued development is the goal of Bell Resources at the Granduc project. Significant remaining high-grade copper resources in the historically productive Granduc deposit form the seed from which Bell intends to grow a compellingly large mineral inventory ahead of mine start-up. A target size of 50 million tonnes of ore grading 2 per cent copper plus credits is a standard against which Bell can measure its exploration success at Granduc.

*A five-hole diamond drilling program completed in the fourth quarter of 2005 demonstrated the southward continuity of high-grade copper with substantial Ag, Au and Co credits extending beyond the known Granduc mine resource. Similar opportunities to expand the existing district resources are known in other parts of Bell's Granduc property identified through historic exploration efforts and Bell's 2005 aeromagnetic/electromagnetic survey. Further expansion of the Granduc property in the third quarter of 2005 through an option agreement on **Teuton Resources' Silver Leduc claims** allows Bell to explore the full range of deposit styles in this extensive magmatic sulphide system.*

*A program of reassaying for Ag, Au and Co in historic core samples will begin early in the first quarter of 2006. **In the late second quarter of 2006, Bell will initiate an extensive diamond drilling campaign to cut 4,500 metres of core in the South zone, North zone and one wildcat geophysical target.***

Subject: Re: Japanese Contacts?

Dear Mr. Schroeter,

Thank you very much for this information. I am pleased that Don was able to show you around at Granduc. I look forward to speaking with you again in the near future.

Sincerely,

Tim Marsh
Bell Resources Corporation

Subject: Japanese Contacts?

Hi, Tim - got your voicemail message requesting contact names for Japanese companies (resulting from a recent tour sponsored by Japan Oil, Gas and Metals National Corporation [JOGMEC] in the Province).

- 1) Masaki Nakatsuka, General Manager, JOGMEC, Vancouver: [email nakatsuka@jogmec.ca]
- 2) Shuichi Miyatake, Assistant General Manager and Senior Geologist, JOGMEC, Vancouver: [miyatake@jogmec.ca]
- 3) Kazuya Mae, Vice President and Chief Mining Engineer, Sumitomo Metal Mining America Inc., Vancouver. [k.mae@mr.smm.co.jp]
- 4) Shinichiro Watanabe, Vice Representative in Canada, Dowa Mining Co., Ltd., Van. [watanas1@telus.net]
- 5) Kuang Ine Lu, Adviser and Geologist, JOGMEC, Vancouver: [lukuang@telus.net].

Not represented on the tour, but certainly an active explorer is Mitsubishi Materials Ltd. (Mr. H Kando), 1212 Park Place, 666 Burrard St. V6C 2X8

Hope this helps. P.S. I very much enjoyed my visit to Granduc.

Tom
