

Drilling is due to begin next week on the Greenhorn property at Cape Horn Creek north of Nakusp. This is an old copper/silver showing (MI 082KSW124 - Cornwall) optioned by Phelps Dodge Corp. from prospector Bruce Doyle. A total of about 450 metres at 3 sites is planned.

- Three out of an expected nine final reports from prospectors on the PA grant program have already been received for review, although the reporting deadline is not until the end of January. Comments on the first have been relayed to Victoria with approval given for the final payment. It was from Barbara Welsh who did a fine job and a professional quality report on her "Chieftain" project located on Caribou Creek at the north edge of the Tillicum Mtn. camp. Claims have been staked to cover two very old mine sites, Chieftain and Eureka, and the area in between. Sampling of the old workings has produced some high silver, lead, gold values in shear-hosted veins (Slocan camp style mineralization). She's put together a well-organized package of information which she hopes will attract some industry interest. I examined the Chieftain u/g with her in the summer and saw stacked, sub-horizontal vein-breccias begging to be drilled with no need for further preliminary work.
