HOTELS & RESORTS 82E

GREENWOOD CAMP

Gold City: Start drilling on Lexington,
followed by Golden Crown;
Resource figs. for both to be released
soon - "very positive"
Proposed mill/millsite - on Phoenix
tailings (to allow for expansion from
200 tpd to 500 tpd). [Will need to make
a deal with George Stewart (Kettle River)]
- Orphan Boy Res. may ship some of its
ore from Willa to Greenwood mill.
(i.e. some there, rest to Goldstream mill)

GREENWOOD CAMP

Mon. July 28/83
Sunny
+38°C

① BWS (Morrison)

- John Kemp's recent trenching (old property) (with George Stewart + David Terry)

- Massive sulphide (pyrite + po + cpx + mal + azur.) 'pods' in 1st. (i.e. SKARU setting)

- apparently JK got some good (decent) assays of Au

Photo: Trench showing sulphide pod (Look E)

- all above old adit (recently timbered)

- Saville Res. ~ 0.05 ✓
(Linda Caron did report)

→ testing southern 'extension' of Motherlode mine (system)

② IC - "Proposed plan to mine slag and ship to Europe (don't know cont. 'use')
- local entrepreneur to apply for two 10,000-tonne bulk sample permits

DUKSBAR WATERPROOF

(3) SNOWSTAR (OB/skywork)

proposal to spend ~ \$30k

→ French part of old u/g

Ag-rich mine (but intersected

very rich gold area u/g duval's
mining in late 1980s

(George Stewart owns part of it;

John Kemp owns much of
u/g workings.

LC - still really likes 'Athelstan'

GREENWOOD AREA

Aug. 13/86

- George Stewart, Jim Fyles

Fredlyn
(wife)
Sunday 30°C

Picture Rk. Quarry
(Midway) - clocks
Synchroite
Kettle River/Noranda

① RAINBOW property (old MIDWAY MINE)

- above (north of) town of Midway
- turn off up to farmers field
- rd. winds around + around

→ to 'Picture Rock' quarry - complete
silica (aquamarine green colour)
- any fluorite?

- looks like silica 'cap' at
top of epithermal system
- but in contact with
'listwanite'

- alt'd quartz porphyry at
old Midway Mine. Does it
play any significance?
(needs better mapping)

- Ken Addison optioned in '84
+ did geochem/geophys. but
ret'd property.

COMMENTS

(9) Low angle Tertiary faults
very 'important'

(1) Should have looked at
TAM O'SHANTER Au prospect
(next time!)

(2) Most all old gold props.
are skarn related - but
no intrusive rock present.

(3) Ages are still debatable
or suspect - need some good
conodonts from stratigraphy!

(4) No 'recent' exploration for
'epithermals' - new focus by
Kettle River syndicate.

(5) Jim Fyles on contract by syndicate

(6) Noranda carrying out large recre
program - drilling this fall

(7) Next time - drive to Deadwood Ck.
prospects - incl. Motherlode

(8) Robert Mines mill - Tillsicum ore to come?
to 1307rd

SYLVESTER K.

Aug. 13/86

- George Stewart - guide

Sunny 30°C

Photo Looking N along original discovery trench.

- outlined by Kettle River to Noranda (1981)

FW MS - 75°

'stringer' Zone

hornfels
'argillite'
'dust tuff'

• 3 Au

• 18 Au

note!

py, po, ch
banded textures

ZONE

1000' x 8' (M.S.)

Assays over 30'

- drilled to 120 ft - nothing below
(too bad!!)

- highly oxidized (ferricrete) zone
assayed up to 102 ft Au
(unfortunately) not enough tons outlined

(OVER)

TAPER zone - west of Sylvester k
- needs work

CANBFC prop.
- Marshall Cr. pt.
- oxidized ore

Sylvester k is a stratabound
volcanogenic ~~to~~ massive
sulphide prospect in
tuffs.
