The initial drill target is a gravity-electromagnetic ("EM") geophysical anomaly with nearby zinc-lead sulphide mineralized outcrops.

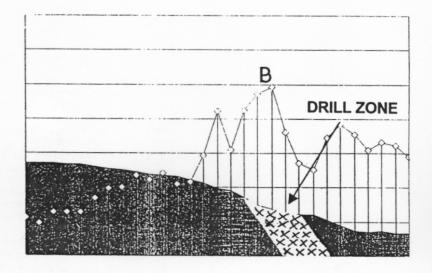

Any mineralized sections of core will be immediately split and sent to Vancouver for analysis.

Results from the first drill holes will be used to prioritize locations for additional follow-up drilling.

DRILLING COMMENCES

Excellerated Resources Inc. is pleased to announce that an exploration crew has mobilized to the Company's Grizzly Lake Project.

The current program, managed by a professional geologist, consists of a program of core drilling. The drill holes are designed to test for the presence of "Mississippi Valley-Type" zinc-leadsilver deposits hosted in faulted and brecciated limestone.

Excellerated Resources Inc.

William Iny, President
