

July 11/96

HARPER CREEK

- visited ^[vic photo] with Mike Sangrenet's
- Noranda zone (west zone)
- QCM (Quebec Cartier) zone - new trenching
→ good Cu min. in qtz-eye, sericite schist
(qtz-eye rhyolite) - schistosity dips N.
- banded magnetite + pyrite 'lenses' (1-1.5m thick)
(analogy - Republic area, Wash. & Key West)
(ie. oxide-type)

Plan: 5700m ddh planned (~20,000')
\$1.2M - budget

MODEL: VAP/TH

- "volcanic, exhalative deposit" - distal
(not kuroko) - felsic to intermed. Tuffs

[Analogy: Kamad/Homestake to South]
~50 miles
