Subject: D.A.Terry Report, December 5, 2003

Mineral Exploration News:

- **Gold City Industries Ltd.** have released the remainder of the assay results for the drill programs carried out this fall on the Lexington and Golden Crown projects in the Greenwood Mining Camp. The King Vein on Golden Crown was tested by 21 holes between surface and 70m depth; highlights include 2.07m assaying 10.43 g/t Au and 0.2% Cu; 1.95m assaying 11.28 g/t Au and 0.71% Cu (previously I reported an intercept of 1.86m assaying 326.82 g/t Au and 0.39% Cu). A total of 26 other holes tested other vein targets on the Golden Crown property including Samaritan (0.94m assaying 21.73 g/t Au and 0.41% Cu), Tiara (1m assaying 81.20 g/t Au and 0.24% Cu), Golden Crown Vein, Portal Vein (1.95m assaying 1.85 g/t Au) and Calumet Vein (2.74m assaying 1.41 g/t Au) - Note Best Values only shown here - for complete assays go to http://www.sedar.com/csfsprod/data41/filings/00592263/00000001/C%3A%5CFILINGS%5CContinuous_Disclosure%5CGold_City_4819%5Cpr112503.pdf). In addition the company has released results from a trenching program carried out on the JD property, 2.5 km northwest of the Golden Crown property. Highlights include 27.4 g/t Au over 1.8m, 12.69 g/t Au over 5m, 12.28 g/t Au over 5m and 8.1 g/t Au over 2m. These trenches tested a 300m strike extent of a 1000m long Au soil anomaly previously tested along only 90m. Mineralization comprises semi-massive to massive sulphide within a northwest-trending shallow-dipping shear hosted by a chert-greenstone succession. Gold City believes the JD veins represents the northwest extension of the Golden Crown mineralized system. The company intends to conduct further trenching to evaluate the remainder of the soil anomaly as well as the 2.5km distance between JD and Golden Crown, prior to drilling.
- **Goldrea Resources Corp.** have released assay results for the two holes completed on the Howell gold project this fall. The company completed two holes totalling 322 metres on the Howell property in the area to the west of HRC-25. Both holes cored Devonian and Cambrian Fairholme/Elko crudely banded carbonates with 0.5-3.0% disseminated and fracture filling pyrite. The carbonates are cut by 0.1-25.0 metre wide dykes and sills of Cretaceous Howell Intrusions which include porphyritic syenite, intrusive breccia. H03-01 intersected 87 metres assaying 0.24 g/t Au and 2.9 g/t Ag while H03-02 cored 106.4 metres assaying 0.22 g/t Au and 4.5 g/t Ag.
- **Klondike Gold Corporation** continue their sedex target drilling program in the Purcells
- **Chapleau Resources Ltd.** have wrapped up their drilling program for this year on their Cranbrook Gold project and are currently compiling results. No assays have been released recently.

Other:

- Stikine Gold Corporation's investor meeting in Cranbrook on November 13th was well attended and received. The company is currently raising \$2M and plans to commence drilling on their Sullivan Deeps target in the new year. A presentation on the project can be seen at: <http://www.sullivandeeps.com/SD/sullivandeeps-nov2003.htm>
- For those who do not know yet, Dennis Llewellyn, Manager of the Chamber of Mines of Eastern BC in Nelson, passed away on November 11th after a short battle with cancer.

Mineral Exploration News:

- **Gold City Industries Ltd.** have announced results from the first 4 holes drilled on the Grenoble Zone at the **Lexington** project, comprising auriferous pyrite-chalcopyrite veins hosted by dacite near a low-angle serpentinite contact. Hole 03GCD-0 intersected 4.57m assaying 28.68 g/t Au and 1.17% Cu - higher grade than most past reported assays from the deposit. Other intercepts reported ranged from 7-9 g/t Au and 0.4-3% Cu over widths of several metres. The company have now completed 2138.7m in 47 holes on the **Gold Crown** property, several more holes on the **Lexington** property, and a trenching program on their **JD** property. Significant intersections from the first 6 holes on the **Golden Crown** property include 1.86m assaying 362.82 g/t Au (9.5 oz Au!!!!) and 0.39% Cu in 03CDH-01 and 1.25m assaying 72.14 g/t Au and 1.31% Cu in 03CDH-03. This mineralization occurs in the steeply dipping **King Vein** which comprises pyrrhotite-pyrite-quartz-chalcopyrite-native gold and is comparable to the **Rosland mesothermal veins**. Assays from the remainder of the holes/trenches are pending. The **Lexington** and **Winnipeg-Golden Crown** deposits are part of the **Greenwood Gold** development project and both properties are located in the historic **Greenwood Mining Camp**.
- **Chapleau Resources Ltd.** have completed another short phase of drilling on their **Lookout (Bar 19)** gold property west of **Cranbrook** and have now moved to the **Jackleg** gold property east of **Wasa** for a 4 hole drill program. No results have been released recently.
- **Goldrea Resources Corp.** have completed a 5 hole drill program on their **Crowsnest** gold project and a 2 hole program on their **Howell** gold project; both properties located in the **Flathead drainage basin**. No assays have been reported yet.
- **Lalo Ventures Ltd.** are currently drilling 1 hole on their **Aubyrd** property, under option from **Commerce Resources**, immediately south of the **Crowsnest** property to test a combined geophysical/geochemical anomaly.
- **Sultan Minerals Inc.** have almost completed a ~20 hole program on their **Kena** Project near **Nelson** - following up on the high grade magnetic corridor they identified earlier in the year, as well as the results of the detailed structural mapping that was carried out on the property during the summer. Assays will be reported all at once when available.
- **Klondike Gold Corp.** successfully completed an extension of hole L-80-1, started by Cominco in 1980, to test the **LMC** in the **Lewis Creek** area north of the **Payday Basin**. Results were reported from the intersection of the **LMC** in the **Fran** drillhole extension NE of **Moyie Lake**; two intervals of 1.1 and 1.3 metres assayed approximately 0.25% Zn. The **LMC** laminated mudstone unit in the **Fran** hole was ~40m thick. The hole 1km to the east of **SMC 95-1**, at the north end of the **Payday** basin, which has been underway since July is currently at ~3400 feet and is near the target **LMC** horizon. Subsequent to completing this hole the company plans to drill one hole in the **Spider-Kidd Creek** area, then move north to the **Clair** and **Pit/Ash** properties.
- **Anglo Swiss Resources Inc.** have announced that they have obtained an "Option Joint Venture Partner" to advance their **Kenville** gold property outside of **Nelson**. They didn't mention in their news release who it was.
- **Grid Capital Corporation** have commenced a 3 hole 300m drill program on the **Rosland Wollastonite** property north of **Rosland** which they optioned from **Horst Klassen**.
- **Cline Mining Corporation**, a company backed by **Mitsui Matsushina Co.** of Japan which operates in Australia, Indonesia, China, and North America (has a JV interest in **Pine Valley Coal** and an equity interest in **Western Canadian Coal**), have acquired coal licences over the **Sage Creek Coal Deposit** in the **Flathead basin**. **Sage Creek Coal Company** (a subsidiary of **Rio Algom**) carried out extensive drilling, mapping, trenching, and bulk sampling was carried out in the 1980s, as well as a detailed feasibility study and Stage 1 Environmental Assessment Report. In-place met coal resources are reported to total 149.9 Mt in 3 seams aggregating 28m thickness in the **North** and **South Hill** deposits combined. The company plans to carry out a detailed review of the available data and do additional work as necessary to fully evaluate the economics of moving the deposit towards production.
- A geophysical survey is currently underway on **Delta Exploration's Silver Lynx VMS** property west of **Nelson**. The company plans a short follow-up drill program this year depending on timing of financing and weather.

Other:

- **Stitikne Gold Corporation** is planning investor meetings to discuss their **Sullivan Deeps** project plans in **Kimberly** on November 12, **Cranbrook** in November 13 and in **Trail** on November 14.

0

Regional Geologist Activity:

- Vacation: August 1-15th
- August 19-22 visits to Georgia Pacific Gypsum, Westroc, Baymag, Rocky Mountain Tufa, Highwood Resources Silica, HP diatreme, and Rocky Mountain Slate quarry with George Simandl (GSB)
- Exploration tracking/monitoring
- land use referrals

Mineral Exploration Activity:

Athelstan-Jackpot: Linda Caron reports that the permitted trenching program on the Athelstan-Jackpot property will be underway this week to uncover a flat-lying, 1m thick, zone from which assays of up to 2-3 oz Au/t have been attained.

Cool Vent/Yahk: Klondike Gold have commenced deepening of a hole drilled last season on their Cool Vent/Yahk property to reach the LMC horizon.

Howell: Goldrea Resources have completed their first phase drill program on the Howell Property in the Flathead drainage which comprised 1075m in 3 holes. The core is currently being spit and sampled. Results of the airborne geophysical survey flown over the property last month have just been received and are being reviewed. Work on the adjacent Crowsnest property is planned to commence in early September. A University of Alberta professor and graduate student recently visited the property to collect samples of the Howell Creek intrusive suite for trace element analysis and isotopic dating.

Kena: Sultan Minerals have temporarily ceased drilling to await assays and to raise further money. To date this year 24 holes have been drilled on the Gold Mountain Zone, Great Western, and Starlight prospects. No results of the drilling have been released to date. As well a significant amount of IP surveying was carried out. Resumption of drilling is planned for mid-late September pending financing.

Silver Lynx: Cassidy Gold Corp. has entered an option agreement with Delta Exploration Inc. whereby Delta can earn a 50%-60% interest in the Silver Lynx VMS Property southwest of Nelson by making share and cash payments and meeting expenditure obligations. No information regarding Delta's plans for the property are known at this time. The full news release can be viewed at: <http://www.cassidygold.com/news/news131.php>

Vowell Creek: Field work comprising soil sampling, geological, and structural mapping is currently being carried out by Jasper Mining Corp. on its wholly-owned Vowell Creek property which covers the past producing Ruth Vermont mine. It is anticipated that a drill program will commence in late September or early October.

Ward Cu-Au: Jonpol Explorations have completed the previously announced trenching program on the Ward Cu-Au property east of Beaverdell. Drilling testing is planned to commence in early September.

Mines and Quarries:

Georgia Pacific 4J (gypsum) estimated production for 2002 is 175,000 tonnes; no exploration this year
Westroc (gypsum) estimated production for 2002 is 475,000 tonnes; 1600m in 40 drillholes on Elkhorn West this year
Baymag (magnesite) estimated production for 2002 is 200,000 tonnes; 960 feet in 2 holes exploration drilling this year
Highwood Resources (silica) estimated production for 2002 is 80,000 tonnes; no exploration this year
Rocky Mountain Tufa - estimated production 2000-3000 tonnes - 2 to 3 times last years production
Rocky Mountain Slate - just getting going, no tonnage estimate

Subject: D.A. Terry Report, July 16, 2002

RG Activity:

- Land Use referrals
- Mineral Exploration tracking and monitoring
- property visits
- Visits to Lone Peak and Sawmill Creek area with Tom Schroeter (July 17-18)

Mineral Exploration Activity:

AuByrd: Solitaire Minerals is planning to commence surface exploration on its AuByrd property in the Flathead area before the end of July. The work will include surface Mag surveying, prospecting, and stream sediment sampling.

Alert **Athelston-Jackpot:** A NoW has been received for 150m of new trenching and cleaning out of 80m of previous trenching on the Athelston-Jackpot property, located NW of Grand Forks.

2 **Howell/Crowsnest:** Goldrea Resources Corp. has announced that it will be contracting Fugro Airborne Surveys to fly 150 line kilometres along 200 metre spaced flight lines with helicopter-borne magnetic and radiometric surveys on its Howell Au property in the Flathead area. The airborne survey, scheduled to be completed in the next week, will be followed up by drilling. Goldrea will carry out a program of mapping, trenching, and drilling on the Crowsnest property, slated to commence in late August.

Kena: Sultan Minerals have been carrying out a field program over the last month comprising, geological mapping, IP surveying, soil sampling, and chip sampling on the Kena Project. Drilling will be commencing soon and the program is expected to continue until late September under the currently approved budget.

Lone Peak: Golconda Resources are currently drilling hole 3 from the pad on top of Lone Peak. Holes 1 and 2 from the setup were 400' and 200' while the current hole is expected to be approximately 1000' in length and is targeting the Spar Lake quartzite horizon. No results are available from the drilling carried out to date from this setup.

Ward: Jonpol Explorations has carried out a soil sampling program on its Ward Cu-Au property in the Beaverdell area. A trenching program will be carried out to follow up on anomalous results from the geochem survey.
