(confidential)

- SE step-out holes - ~~overprint~~  
of silica on Cu-rich zone  
(+chl.)

- want to keep strip ratio below  
~~1.5:1~~ 1.5:1

- to drill off zone - est. #45  
holes ~ #2 million.

# Expo

July 5/91

- Potential (as seen by BHP - Utah geol.)
- ① north of main zone (NW zone)
  - ② SE portion
  - ③ around silica cap

NW Expo Zone - across valley  
 from Red Dog = silica cap  
 (+ pyrophyllite) overlies mag. +  
 py + MoS<sub>2</sub> veinlets

## EXPO

June 14/90

- with Paul Wilton, Nick Massey,

Sunny + 18°C

- Dave Pawlinski, Dave Melville, Rob Lane  
- Tonto sitting

90-173 ~ 612 ft Silic. v. c. + bn

Photos ① Taiwan Eng./Moraga camp core

② McIntosh Mtn. area - siliceous 'cap'

③ Looking north over Hushamu zone (2)

④ Looking westerly over Hushamu zone (4)

- Hushamu zone in valley bottom i.e.  
difficult to mine- tried to get 'hoe' to south of zone  
to drill but unsuccessful,- silica 'cap' exhibits both vertical  
qtz veins (streaming?) and rel. massive  
(replacement?) silica. Also bx.

→ Ab. pyrite everywhere! i.e. potential AMS!

June 15/96  
Fog, cool

- + Peter Duster, Bob Holland
- ① Wann prop. area
  - Gd intr. with ab. zeolite - cp-py
  - + minor cpx
  - (fringe of system?)

Photo Logging near top of Pemberton Hills  
(on silica knobs) - also py-rich  
banded rk. with bx.

## RED DOG DEPOSIT - olympic drilling

- top of ridge - (no stripping ratio)
- highly magnetic
- silica is very vuggy locally
- cpx, py,  $MoS_2$ , bn
- ~~bn~~ is very fr. dissem. (not frags.)
