11V Property

Aug. 6/77

On Aug. 6th I visited the In property with Dave Silversides, geologist in charge. Cities has a 5 yr. working option agreement with Can. Sup. This year Cities (diamond) drilled 2 holes from the same set-up in the valley bottom below the camp. One (00H-1) was drilled vertically to a depth of 887 ft. and the second (00H-2) was drilled at an angle of -50° into the slope to a depth of 560 ft. The holes ^(00H-1,2) were collared in alt'd BFP land headed toward the "Copper Zone" outlined on confidential map.

The alteration of the "BFP" on the property may be the key to understanding the setting
ie. green sauss, hematite, magnetite, secondary (known) bio.

- Potential appears to be NE towards airstrip
ie. needs further work!

- mafics nearly completely alt'd to hem.?

- saussuritized QFIP + dissem py + spec. hem.

- BFP

- Good multiple gtz veining in places

- minor pbs. Min. - py + cpy + MoS₂.
