

recent (2003) Pb isotope analysis  
 (by Murray McLaren) on Homestake  
 vein  $\Rightarrow$  "Jurassic" 29/10/03  
 North Banner Pit - some grabs from  
 - down slope (entire strike to W of Homestake vein) dump  $> 10$  g/t Au  
 2003 trenching  
 PbS + cpy in gtz (some druse)  
 (best value this year  $\sim 20$  g/t Au  
 $\sim 15$  m strike length ( $\sim 300$  m E)  
 $\sim 2$  m wide

Photo - (largest) open area - Banner  
 vein (8 m wide!) (no assays yet)  
 - same as Homestake vein  
 - cpy small in gtz vein  
 28 m strike exposed over 7.5 m  
 - massive PbS 'lens' + cpy in interstices  
 of gtz by  
 - look @ Bullion pits (2) above  
 IXL Property - across valley (to west) of skarn target  
 found by Jack Carson new Franklin mtn Survey Rec.

IXL (New Century) Oct. 27/05  
 - talk by Linda Caron @ Mt. Souda  
 (Crambert)  
 - analogy to Lametoot, WA  
 (volcanogenic massive oxide  $\equiv$  magnetite)  
 $\sim 2$  mt @ 7 g/t Au  
 - Phoenix: 27 mt @  $\sim 1\%$  Cu, 0.2 g/t Au  
 (+ Sylvester k)  $\Rightarrow$  Franklin Gp  
 $\rightarrow$  McKinley (skarn) showing to east  
 (new showing - "JACK" - 300 m strike)  
 Zn S in (Greenwood-Gf) sharpstone gtz  
 - magnetic anomalies need testing.
