KWANIKWA

93N043, 073

Mon. Sep. 4/06

93N/6W

- with Bob Lane

Sunny + 25°C

- meet in Fort St. James with Dave Moore (Berengesi)
- examine skeletal core from Hole #4

36m @ 0.2% Cu (no analysis for Au or Mo) + NMT geochem

- drilled 5 holes + (IP in spring)
- small resource 'printed' (large NNW anomaly)
- 06-01 - on 'resource' - released assay only
- 06-02 - Sec 5 S. (1300m N) (old percussion hole)
- 06-03 - to NNW on edge of IP anomaly on Sec 5 N (.69% + 2 g/t Au in trench)

- 06-04 - on Sec. 10N
- 06-05 - on Sec. 29N

→ 'Best' hole - in volcs - ksp + qtz-ser + tourmaline (+ cpx + bn) + Mo also tourmaline breccia

Mih: style - alkaline - but also has Mo (.02) → showing prop. to Terrane Metals later this week

Core Photo: K06-04-71m ksp + alt + cpx + py + crosscutting mag. veinlet - better cu appears in more infic phase.

FIELD (S)

Cave Photo

K06-04-113, 2m late-stage

qtz-carb veinlets cutting  
'darker' host peppered with  
fn. cpy.

---

- need creek crossings(s), but need  
permitting (i.e. best in winter)  
with 'decent' drill <sup>prospector from Houston</sup>  
(Aug. program used Steve Bell's  
small drill, run with Gary Thompson)
