884806

R.D. PENHALL LTD. MADE IN VAN
DUKSBAY WATERPROOF

on 3rd drill hole on LCR.

#1: Shea occurrence: pot py
'replacement' (skarn) in sed
[cut off by fault i.e. small pod; no joy]

#2: Maxex showing area
(min file) - $\text{Cpx} + \text{MnS}_2$

#3, plus - test MnS_2 (soil) anomaly
(up to 800 ppm)

several holes following up 2004 ddh
on 'replacement-style' min. (à la Shea)
on west side of Maxex anomaly
- Intr. host = tonalite (bio. GA)

Seds = sandstone, gneiss

Min. = $CPY + Mo_2$ in gfs
veinlets in intr. ^(p. 200-210) host

Seds. ~~At~~ Some po + mag.

Alth.: weak to mod. - epidote,
samarite

- late-stage lamprophyre dykes.

- tighten up soil's grid; do EM

- visited core area in Terrace
- not alot of joy (yet?)
