

Don, I looked for you this afternoon to chat about this but you were out at an important directors mty! What we should think about, amongst other things, is re-thinking the metallogeny of some camps (e.g. Boralome, Boundary) with the new ophiolite concept in mind. I have had a lot of thought talks with Chris Ash and I know what he has been observing.

This is all great stuff and an important ~~an~~ first step. What we must now do is go one step further - e.g. If Chris' interpretation of these rock types and their relationships is correct, then lets follow up with some detailed studies (litho geochem, age dating, re-interpretation of mineral deposits) with the aim of developing a consillarian model for MDs in ophiolitic suites - With Jim's recent mapping, the Greenwood area might be a good place to start!

Merry Christmas

Vic

Too structurally complicated to start!
